**QUESTION 1**

A school with a limited budget either receives computers as donations or buys them in small quantities. As a result, the school has several varieties of computers and associated hardware. Each quarter, all student computers must be reset to a fresh state to prepare for the next group of students. When the computers are reset, the OS is manually installed, all of the drivers for each unique system are installed, and each application is installed one at a time by CD. The process is cost effective, but highly prone to error and often results in several days of clean-up by the teachers. Which two benefits would the school realize by using Deployment Solution? (Select two.)

- A. It can automate the application installations through use of the Software Portal.
- B. It can install the operating systems automatically using a Scripted OS Installation.
- C. It can manage the drivers for each system through use of Prepare the Image tasks.
- D. It can install the operating system automatically through use of PC Transplant.
- E. It can automate the application installations through use of Restore Software tasks.
- F. It can automate driver installation through use of Deploy Anywhere.

Correct Answer: BF

QUESTION 2

What are two possible Patch Management Solution 7.1 configuration changes that can be made to reduce the total number of bulletins managed in the solution? (Select two.)

- A. Deselect additional languages that are undesired in the Managed Languages section of the Patch Management core settings.
- B. Edit the PMImport.xml and delete rows that contain unused language and product names found in the file.
- C. Select Microsoft product names from the Resource Inclusions section of the Microsoft settings.
- D. Select unused Microsoft product names in the environment in the Resource Exclusions section of the Microsoft settings.
- E. Select the Disable All Superseded Software Updates setting within the Import Data for Microsoft policy.

Correct Answer: AD

QUESTION 3

How does the Software Management Framework improve software management?

- A. It allows the creation of a single policy to install a software title and ensures that it remains properly installed.
- B. It allows for comprehensive tracking of software execution statistics.
- C. It allows software titles to be associated to software licenses and purchases.

D. It allows for a single view of current deployments and cost details based on current installations and purchasing details.

Correct Answer: A

QUESTION 4

An administrator needs to create an exact image of a computer using Deployment Solution 7.1. Which type of imaging task should the administrator use?

- A. Capture Disk Image task
- B. Backup Disk Image task
- C. Capture Personality task
- D. Restore Backup Image task

Correct Answer: A

QUESTION 5

A Managed Software Delivery policy executes in which order?

- A. detection check, wait for scheduled time, compliance check, download package, wait for scheduled time, remediation action
- B. wait for scheduled time, compliance check, remediation action, download, wait for scheduled time, Software Execution
- C. wait for scheduled time, compliance check, download package, wait for scheduled time, remediation action
- D. download package, wait for scheduled time, compliance check, detection check, remediation action, Software Execution

Correct Answer: C

QUESTION 6

When reviewing compliance reports for the Microsoft products, the system administrator notices that the data and bulletins have remained unchanged for two weeks. What should the administrator check to address this issue?

- A. Revise Software Update task
- B. Import Patch Data for Microsoft policy
- C. Patch Management Import task
- D. Microsoft Compliance Update policy

Correct Answer: B

**QUESTION 7**

Which limitations are placed on software information collected using a Standalone Inventory task on an unmanaged 64-bit computer?

- A. Because the Standalone package lacks native 64-bit support, only 32-bit programs are reported.
- B. References to the Software Catalog are missing for the unmanaged computer.
- C. Any patches staged in Patch Management are removed from the inventory results for the computer.
- D. License information is limited to Microsoft products only.

Correct Answer: B

QUESTION 8

What is the function of the applicability rule?

- A. It determines conflicts with other software resources within the Software Catalog.
- B. It determines if a software resource has all the required components for delivery.
- C. It determines if a software resource is applicable to the Software Portal for self-delivery.
- D. It determines if a software resource is applicable to a given computer.

Correct Answer: D

QUESTION 9

A system administrator is working in the Software view and notices that the corporate applications from the application share are missing under newly discovered software.

What could be the reason for this?

- A. There are duplicate entries in the Software Catalog.
- B. Discovery needs to be configured for the shared location.
- C. The Software Library needs to be configured to import from that location.
- D. The Software Discovery policy is disabled.

Correct Answer: C
