QUESTION 8

What is prerequisite for creating a NAT or routed network profile in vRealize Automation?

A. An existing external network profile

B. A load balancer

C. A predefined DNS server

D. A predefined DHCP range

Correct Answer: A

Existing network configured on the vSphere server. They are the external part of the NAT and routed networks types. An external network profile can define a range of static IP addresses available on the external network. You can use IP ranges obtained from the supplied VMware IPAM endpoint or from a third-party IPAM service provider endpoint that you have registered and configured in vRealize Orchestrator, such as Infoblox IPAM. An IP range is created from an IP block during allocation. An external network profile with a static IP range is a prerequisite for NAT and routed networks.
