**QUESTION 1**

Which of the following Samba VFS modules can be used to store Windows ACLs?

- A. vfs_acl_proxy
- B. vfs_acl_fake
- C. vfs_acl_tdb
- D. vfs_acl_xattr
- E. vfs_acl_ramdisc

Correct Answer: CD

QUESTION 2

What is the NetBIOS equivalent of an /etc/hosts file, equating an IP address to a system NetBIOS name. (Specify only the file name without any path)

- A. lmhosts

Correct Answer: A

QUESTION 3

After adding a remote CIFS share to /etc/fstab, the share is mounted to the correct location in the file system. There, all files belong to the user and group root and are not readable or writable by any other users on the system.

What should be done in order to permit distinct local user access to the mounted files?

- A. The option root squash = yes should be added to the share in the Samba server's smb.conf to allow full access by the client.
- B. The mount.cifs options uid, gid, file_mode and dir_mode should be used to specify the ownership and permissions of the mount.
- C. The user should be added to the local user group smbusers, as mount.cifs by default restricts access to all CIFS mounts to member of this group in addition to the root account.
- D. The mount.cifs command should always be executed by user who will use the mount afterwards. The user should be granted the required permission in /etc/sudoers.

Correct Answer: C

**QUESTION 4**

After installing a network with one Samba server and several clients, users are complaining that they receive an Unable to browse the network error when trying to visit a public share. What is the most likely cause of this?

- A. The user entered the wrong username and/or password.
- B. The nmbd process is not running on the Samba server.
- C. The user hasn't mapped the share to a local drive letter yet.
- D. The Samba server is not configured as a Domain Master Browser.

Correct Answer: B

QUESTION 5

What command checks the Samba configuration file for syntactical correctness? (Specify ONLY the command without any path or parameters.)

- A. TESTPARM

Correct Answer: A

QUESTION 6

The _____ parameter in the smb.conf file will set hidden files in Linux to also be hidden in windows. (Please specify ONLY the parameter with no value assignment.)

- A. hide dot files

Correct Answer: A

QUESTION 7

Which option to mount.cifs specifies a file that contains the user name, password and domain that should be used for authentication against the server during the mount? (Specify only the option without any values or parameters)

- A. credentials

Correct Answer: A

QUESTION 8

The _____ command, included with OpenLDAP, will generate password hashes suitable for use in slapd.conf. (Enter the command with no options or parameters)

A. slappasswd

Correct Answer: A

QUESTION 9

Which of the following commands regenerates slapd indices based on the current database?

A. slapd index

B. sindexd

C. slapindex

D. There is no index command. Indexing is handled by the slapd daemon.

Correct Answer: C

QUESTION 10

Which service unifies Linux and Windows account management by allowing a Linux system to include Windows domain users in the Linux user database?

A. Winbind

B. PAM

C. NIS

D. OpenLDAP

Correct Answer: A

Samba winbind provides a unified login experience between UNIX or Linux and Windows systems by letting users log on to a UNIX or Linux host by using Windows domain credentials.

QUESTION 11

What is stored in the secrets.tdb database file?

A. The password of the Samba user Administrator.

B. The password of the Samba user root.

C. Starting with Samba3 this file is no longer used.

D. The SID of the local machine.

Correct Answer: D

QUESTION 12

After modifying the indexes for a database in slapd.conf and running slapindex, the slapd daemon refuses to start when its init script is called. What is the most likely cause of this?

- A. The indexes are not compatible with the init script.
- B. The init script cannot be run after executing slapindex, without first signing the indexes with slapsign.
- C. The init script has identified one or more invalid indexes.
- D. The init script is starting slapd as an ordinary user, and the index files are owned by root.

Correct Answer: D

QUESTION 13

What is true about the [homes] section in smb.conf?

- A. It is a template used for all home directories of users on the Samba server.
- B. Users can access their home directory only by accessing the share with the name homes.
- C. It is a template used for all user created shares on the Samba server.
- D. The maximum number of homes shares per used can be limited using the parameter usershare max homes.

Correct Answer: A

QUESTION 14

Which of the following statements is true about DNS in an Active Directory Domain?

- A. When resolving DNS names? all domain members must query a domain controller or a DNS server that serves the exact same zone content.
- B. It is not possible to use secondary DNS servers in conjunction with an Active Directory domain.
- C. DNS name resolution is not mandatory in an Active Directory Domain, as long as a WINS server can be reached.
- D. Active Directory only uses A and AAAA records no other record types to serve important information regarding the domain.

Correct Answer: A

QUESTION 15

Which of the following properties does the configuration option cachesize in slapd.conf refer to?

- A. The number of entries to be cached.
- B. The size of the cache in bytes.
- C. The size of the cache in bits.
- D. The minimum cache size in bytes.
- E. The maximum cache size in bytes.

Correct Answer: A
