QUESTION 12

Prime Uses Which protocol for devices discovery?

- A. RARP
- B. OSPF, LLDP

Correct Answer: B

The LLDP answer is correct given

Cisco Prime Infrastructure uses and enhances the discovery mechanisms by using protocols such as ping, SNMP (v1, v2c, and v3), Cisco Discovery Protocol, Link Layer Discovery Protocol (LLDP), and Open Shortest Path First (OSPF) to

discover the network automatically. This section will focus on how best to configure the discovery settings once and to automate the discovery, going forward.

You can add devices to Cisco Prime Infrastructure in one of the following ways:

Use an automated process

Discovery Settings

Quick Discovery

Import devices from a CSV file.

Add devices manually by entering IP address and device credential information.

<https://www.cisco.com/c/en/us/products/collateral/cloud-systems-management/prime-infrastructure/guide-c07-736611.html>

However RARP is an obsolete protocol to look up ipv4 address from the MAC. Thus the answer should be either SNMP or OSPF along with LLDP.
