

Exam : **3X0-202**

Title : Apache Webserver (Level 2)

Version : DEMO

www.Pass4itSure.com

1. Which of the following HTTP headers will direct a browser to www.site.com after waiting five seconds?

- A. Rewrite 5; URL = <http://www.site.com/>
- B. Location 5; URL = <http://www.site.com/>
- C. Refresh 5; URL = <http://www.site.com/>
- D. Reload <http://www.site.com/> -t 5
- E. Direct -t 5 <http://www.site.com/>

Answer: C

2. Cookies can be used by Apache to create a click stream log of user activity. However, for the cookies to work, Apache must be compiled with the module, then the _____ directive must be added to the `httpd.conf` file.

- A. `mod_usertrack`; Cookie Tracking on
- B. `mod_cookies`; Cookies on
- C. `mod_cookiestracking`; cookie Tracking on
- D. `mod_cookieslog`; Cookie logging on
- E. `mod_userlog`, cookie logging on

Answer: A

3. Which of the following are TRUE regarding containers in `httpd.conf`? (Choose two.)

- A. Containers consist of a Paired set of delimiters.
- B. If two containers contradict, the first is applied.
- C. Containers may only be applied globally.
- D. Containers allow individual virtual hosts to have their own settings.

Answer: A, D

4. Which of the following best explains why Apache Web servers are able to handle multiple requests?

- A. In addition to port 80, Apache opens ports 8080, 8000, and others to handle the additional requests.
- B. Apache is able to spawn child processes that handle requests before they die.
- C. Apache uses the `renice` service to load balance between different system daemons.
- D. Upon reaching a set number of requests, Apache uses a raw socket to adjust a system's bandwidth to handle the additional requests.

Answer: B

5. Consider the file "test.html". Which of the following best describes what code does?

```
<html>
<form>
<INPUT TYPE="button" VALUE="set cookie"
onClick = "document. Cookie = `first_name=Fred`; ">
```

```
<INPUT TYPE = "button" VALUE = "display cookie"  
onClick = "alert (document.cokkie);">  
</from>  
</html>
```

A. When the user clicks on "set cookie," it prompts the user for value. Once the value is entered, it can be displayed using the "display cookie" button.

B. When the user clicks on "set cookie," the first_name cookie is set to "Fred." The first_name cookie can be displayed by clicking the "display cookie" button.

C. When the user first loads "test.html," first_name is automatically set to "Fred." The value of first_name can be seen with the "display cookie" button. The first_name cookie can be reset to empty ("") by clicking the

"set cookie" button.

D. When the user clicks on the "set cookie" button, a new HTML page is loaded that displays the word "Fred".

When the user clicks on the "display cookie" button, it alerts the user that it has been deleted.

Answer: B

6. Which of the following can be used to send a cookie to the http client? (Choose two.)

- A. XMLScript
- B. Static HTML
- C. JavaScript
- D. CGI scripts
- E. GIFScript

Answer: C, D

7. Ralf, a user, wishes to upgrade his existing version of Apache by including mod_ssl as a loadable module.

Assuming that the shared object for mod_ssl is libssl. So, that mod_ssl is located in "/prefix/modules/", which of the following must be present in his httpd.conf file?

- A. LoadModule mod_ssl modules/libssl.so
- B. AddModule mod_ssl modules/libssl.so
- C. LoadModule /prefix/modules/libssl.so mod_ssl
- D. AddModule /prefix/modules/libssl.so mod_ssl

Answer: A

8. Liz has completed an Apache installation on her computer. She did not encounter any errors. Which of the following can she use to see Apache's default index? (Choose two.)

- A. http://localhost
- B. http://localhost
- C. http://index
- D. http://192.268.0.0
- E. http://127.0.0.1

Answer: B, E

9. One security exploit with Apache is to include a command in a script that lets the scripts execute a command found in one of its variables. For example, a script might contain the `who` command and display a list of users logged into the server. Which of the following, if included in a CGI script, will run a command with the appropriate permissions?

- A. `declare`
- B. `fork`
- C. `export`
- D. `eval`
- E. `eacho`

Answer: D

10. Which of the following represents a security concern of programming CGI scripts using the C programming language?

- A. C programs must be run with `setuid root`.
- B. If the program receives more data than the amount of memory it has allocated, a buffer overflow can cause the program to exit to a shell on the server.
- C. Many early C compilers lack the ability to dynamically alter file permissions, which results in many C programs running with root permissions.
- D. CGI scripts written in C compile at runtime on the client system, which makes the client vulnerable.
- E. If the server and client do not have identical compiler versions, the lesser compiler is used, which may

have known exploits.

Answer: B

11. Which of the following best explains the function of the `KeepAlive` directive in Apache 1.1?

- A. It defines the length of time Apache will wait before spawning additional processes.
- B. It constantly checks on the Apache service and reports via `syslogd` if there is a server problem.
- C. It makes a backup by spawning clones of itself in case the server goes down.
- D. It defines how long a server process can keep a connection before shutting down.
- E. It tells Apache how long to wait before going into the zombie process state. Answer: D

12. Which of the following scenarios most accurately describes the Apache initialization sequence?

- A. Apache spawns one child process each second until MaxSpareServer is satisfied or MaxClients is reached.
- B. Apache spawns one child, then two, then four, and up to 32 processes per seconds until MaxClients is reached or Minspare Servers is satisfied.
- C. Apache spawns one process then continues to double the number of processes spawned each second indefinitely until MaxClients is reached or MinSpareServers is satisfied.
- D. Apache spawns the needed number of child processes dependent on the incoming requests until MaxClients is reached or MinSpareServer is satisfied. For example, if three requests come in, Apache would spawn three processes, and soon.

Answer: B

13. How does Apache enable CGI scripts? (Choose two.)

- A. It links source pages to the appropriate client compiler.
- B. It implements suid and makes the script executable.
- C. It defines content types based on the extension.
- D. It references directories that contain the scripts.

Answer: C, D

14. Jake has the text below in his httpd conf file. He does NOT have mod_mime_magic compiled as part of the Apache server configuration. Which of the following are TRUE concerning this information? (Choose two.)

```
LoadModule vhost_alias_module modules/mod_vhost_alias.so
# LoadModule env_module modules/mod_env.so
# LoadModule agent_log_module modules/mod_log_agent.so
# LoadModule mime_magic_module modules/mod_mime_magic.so
# LoadModule mime_module modules/mod_mime_magic.s
<IfModule mod_mime_magic.c>
MIMEMagicFile share/magic
</ifModule>
```

- A. The MIMEMagicFile directive will be processed.
- B. The MIMEMagicFile directive will NOT be processed.
- C. The server will NOT be able to use hints in share/magic to determine file types.
- D. The server will be able to use hints in share/magic to determine file types.

Answer: B, C

15. An administrator needs to set the permissions an Apache Web server to maximize security, while still allowing for full functionality. Which of the following permissions are most appropriate for Apache

configuration files and Apache executables, respectively?

- A. 755, 000
- B. 755, 111
- C. 511, 755
- D. 777, 555
- E. 755, 511

Answer: E

16. The block of code below is found in the httpd.conf file. Under what conditions would this block of code execute?

```
<If Module !PHP/4.0>  
...  
</If Module>
```

- A. If PHP/4.0 is NOT compiled or loaded into Apache when the block of code is called
- B. If PHP/4.0 is NOT compiled or loaded in the module's shared library when the block of code is called
- C. If PHP/4.0 is compiled or loaded into Apache when the block of code is called
- D. If PHP/4.0 is compiled or loaded in the module's shared library when the block of code is called

Answer: A

17. Which of the following is a requirement for IP-based virtual hosting?

- A. Separate network devices, each with its own IP address.
- B. Separate IP addresses for each virtual host
- C. Separate configuration files for each virtual host.
- D. Separate IPAlias directives in the httpd.conf file for each virtual host.

Answer: B

18. Tom would like to group all of his CGI scripts to /lib/cgi-bin/. In order to do this, he needs to use the ScriptAlias directive in the httpd.conf file of his Apache server. What modules need to be compiled in order for this to work? (Choose two.)

- A. mod_cgi.c or any module that supports the common gateway interface
- B. mod_bin.c
- C. mod_negotiation.c or any module that does protocol negotiation
- D. mod_alias.c
- E. mod_script.c or any module that does script parsing

Answer: A, D

19. The system administrator has configured Apache to write its log files via the system logging daemon. When Apache writes its log files to syslog, it will run with the permissions of which user?

- A. Always as root

- B. Always as nobody
- C. Always as webuser
- D. Always as the owner of the http process
- E. Always as the owner of the syslogd process

Answer: B

20.If a user has already defined a log format called "common, "which of the following directives will ALWAYS make Apache log requests to "/var/log/apache/access_log" using the " common" format?

- A. TransferLog /var/log/apache/access_log format=common
 - B. TransferLog /var/log/apache/access_log common
 - C. CustomLog /var/log/apache/access_log format=common
 - D. CustomLog /var/log/apache/access_log common
- Answer:
D
