### QUESTION 7

What is a challenge of having an SD-Access Centralized design where a single fabric encompasses the main site and all branch sites across the WAN?

- A. End to End Routing is not supported
- B. SSIDs would be the same across all sites
- C. DNA Center does not support it
- D. Since the traffic is encapsulated. SD-WAN features can't be used to optimize/route traffic.

Correct Answer: D

Due to the encapsulation at the fabric edge itself, the IP classification that the features were based on at the distribution is not available and hence the consideration of moving these features now to the access layer switches in the network. The end-to-end connectivity between the network elements in the underlay is provided by standard means including routing protocols. <https://www.cisco.com/c/en/us/solutions/collateral/enterprise-networks/software-defined-access/guide-c07739524.html>
