QUESTION 1

You need to configure the Skype for Business Server 2015 infrastructure to meet the security requirements for the human resources department. The solution must minimize administrative effort. What should you do?

A. Modify the global external access policy.

B. Create a new user-level client policy.

C. Create a new user-level external access policy.

D. Modify the Access Edge Configuration settings.

Correct Answer: C

Explanation:

Only the users in the human resources department must be prevented from connecting to Skype for Business Server 2015 remotely.

A user-level external access policy applied to the human resources users will override the global external access policy that allows other users to connect.

External access policies can grant (or revoke) the ability of your users to do any or all of the following:

Communicate with people who have SIP accounts with a federated organization. Note that enabling federation alone will not provide users with this capability. Instead, you must enable federation and then assign users an external access

policy that gives them the right to communicate with federated users.

Communicate with people who have SIP accounts with a public instant messaging service such as MSN.

Access Skype for Business Server over the Internet, without having to first log on to your internal network. This enables your users to use Skype for Business and log on to Skype for Business Server from an Internet café or other remote

location.

QUESTION 2

You need to configure the DNS record for the planned federation relationship.

How should you configure the record? To answer, select the appropriate configurations for the DNS record in the answer area.

QUESTION 4

A company deploys Office Web Apps Server 2013 to support Microsoft Exchange and SharePoint. You have a physical instance of SQL Server in an AlwaysOn Availability group configuration. The company plans to deploy a Skype for Business Server 2015 solution that supports 10,000 users.

You have the following requirements:

- Existing meeting rooms must be able to join Skype meetings that use video.
- All new servers must be deployed in the existing virtual environment when possible.
- Video interoperability must use a Skype for Business solution.

You need to deploy the Skype for Business Server 2015 roles. In the table below, identify the server role to be deployed. NOTE: Make only one selection in each column. Each correct answer is worth one point.

QUESTION 12

You need to correct the issue and reduce further administrative overhead. What should you do?

A. Modify the SRV record_sipfederationtls._tcp.adatum.com to point to the new Fabrikam Access Edge FQDN on port TCP/5061.

B. Modify the federation configuration to enable Open Federation.

C. Allow outbound connection on port TCP/5061 from Edge Server to any IP address on the Internet.

D. Modify the SRV record_sipfederationtls._tcp.wideworldimporters.com to point to the new Fabrikam Access Edge FQDN on port TCP/5061.

E. Modify the SRV record_sipfederationtls._tcp.adatum.com to point to the new Fabrikam Access Edge FQDN on port TCP/443.

F. Modify the SRV record_sipfederationtls._tcp.wideworldimporters.com to point to the new Fabrikam Access Edge FQDN on port TCP/443.

Correct Answer: B

Explanation:

This answer would only work if Fabrikam corrected their _sipfederationtls._tcp.fabrikam.com SRV record when they changed their Access Edge fully qualified domain name (FQDN). However, it is the only possible answer. It also meets the

requirement of reducing further administrative overhead.
