### QUESTION 1

You have an Exchange Server organization that contains five servers. The servers are configured as shown in the following table.

Server name	Role	Exchange Server version
Server1	Unified Messaging server	Exchange Server 2010
Server2	Mailbox server	Exchange Server 2013
Server3	Client Access serverHub Transport server	Exchange Server 2010
Server4	Mailbox server	Exchange Server 2010
Server5	Client Access server	Exchange Server 20

You deploy Microsoft Lync Server 2010. You need to create a Lync Server SIP Unified Messaging (UM) dial plan to enable voice integration between Lync Server and Exchange Server. Which three Exchange servers should you associate to the UM dial plans? (Each correct answer presents part of the solution. Choose three.)

- A. Server1
- B. Server2
- C. Server3
- D. Server4
- E. Server5

Correct Answer: ABE

A: You can enable Unified Messaging (UM) in Microsoft Exchange Server 2010. You must enable the Exchange computer running the Unified Messaging server role before the Unified Messaging server can process calls for UM-enabled

Exchange 2010 recipients in your Exchange organization. However, the Unified Messaging server also must be added to a UM dial plan before it can process calls for Unified Messaging.

B, E:

\*

Requirements and Recommendations

Client Access and Mailbox. In Microsoft Exchange Server 2013, Exchange UM runs as a service on these servers.

\*

Deploy the Exchange Mailbox server roles in each Exchange Unified Messaging (UM) forest where you want to enable users for Exchange UM. Reference: Configuring Unified Messaging on Microsoft Exchange Server to Work with Lync Server 2013

## QUESTION 2

You need to recommend which tasks must be performed to meet the security requirements for Tailspin Toys. Which two tasks should you recommend? (Each correct answer presents part of the solution. Choose two.)

- A. Run the `set-transportserver -transportsyncenabled $true` command.
- B. Run the `set-transportconfig -tlsreceivedomainsecurelist tailspintoys.com` command.
- C. Run the `set-transportservice -transportsyncenabled $true` command.
- D. Create a new Receive connector.
- E. Create a new Send connector.

Correct Answer: BD

\*

Scenario:

Secure all of the email messages from the users at Tailspin Toys to the Contoso users. Ensure that all of the messages can be secured if the certificates at Tailspin Toys are issued by a trusted third-party certification authority (CA).

\*

Configuring Domain Security on Exchange Server 2013

1.

Establish certificate trust between organizations

2.

Configure Domain Security

TLSReceiveDomainSecureList - specifies the domains from which you want to receive domain secured email by using mutual Transport Layer Security (TLS) authentication.

3.

Configure connectors Reference: Configuring Domain Security on Exchange Server 2013

---

## QUESTION 3

You discover that the Large Audience MailTip is not displayed when users compose an email message to the 20 new distribution groups.

You need to ensure that the Large Audience MailTip is displayed for the new distribution groups immediately.

Which cmdlet should you use?

- A. Set-DistributionGroup

- B. Set-MailboxServer
- C. Set-ClientAccessServer
- D. Start-ManagedFolderAssistant

Correct Answer: B

#### QUESTION 4

You need to ensure that users in the organization are notified before they send email messages to external recipients. Which cmdlet should you run?

- A. Set-Mailbox.
- B. Set-OrganizationConfig.
- C. Set-TransportAgent.
- D. Set-TransportConfig.

Correct Answer: B

#### QUESTION 5

You have a database availability group (DAG). The DAG is configured as shown in the following table.

Servername	Sitename	Role
EX1	Site1	Mailbox server Client Access server
EX2	Site1	Mailbox server Client Access server
EX3	Site1	Mailbox server Client Access server
EX4	Site2	Mailbox server Client Access server
EX5	Site2	Mailbox server Client Access server

You need to prevent a split-brain condition if a restore operation of the DAG occurs. What should you do?

- A. Deploy an alternate witness server to each site.
- B. Modify the Datacenter Activation Coordination (DAC) mode.
- C. Set the quorum model of the cluster to Node and Disk Majority.
- D. Deploy another Mailbox server to Site2.

Correct Answer: B

Datacenter Activation Coordination (DAC) mode is a property setting for a database availability group (DAG). DAC mode is disabled by default and should be enabled for all DAGs with two or more members that use continuous replication. If a catastrophic failure occurs that affects the DAG (for example, a complete failure of one of the datacenters), DAC mode is used to control the startup database mount behavior of a DAG. When DAC mode isn't enabled and a failure occurs that affects multiple servers in the DAG, and then when a majority of the DAG members are restored after the failure, the DAG will restart and attempt to mount databases. In a multi-datacenter configuration, this behavior could cause split brain syndrome, a condition that occurs when all networks fail, and DAG members can't receive heartbeat signals from each other. Split brain syndrome can also occur when network connectivity is severed between datacenters. Split brain syndrome is prevented by always requiring a majority of the DAG members (and in the case of DAGs with an even number of members, the DAG's witness server) to be available and interacting for the DAG to be operational. When a majority of the members are communicating, the DAG is said to have quorum.

---

#### QUESTION 6

You have an Exchange Server 2010 organization. A user named User1 connects to his mailbox using Microsoft Office Outlook. User1 reports that he is unable to send encrypted email messages to an external recipient named User2. You verify that User1 and User2 have email encryption certificates. You need to ensure that User1 can send encrypted email messages to User2.

What should you do first?

- A. Instruct User2 to add a delegate.
- B. Instruct User2 to send a signed email message to User1.
- C. Instruct User1 to send a signed email message to User2.
- D. Instruct User1 to modify the sensitivity settings of the email message.

Correct Answer: B

---

#### QUESTION 7

Use the drop-down area to select the appropriate answers.

Hot Area:

Answer Area

To ensure high availability of web services, the certificate with the thumbprint 95764604705BD4C28E1E390ABA820AF7EB57E541 must be [answer choice].

Modified to include an additional service
Modified to include an additional namespace
Imported on another Client Access server in the same site

When a domain-joined client computer attempts to discover the Outlook Anywhere configuration settings, the AutoDiscover URI [answer choice].

must contain ex2.contoso.com
must contain autodiscover.contoso.com
can contain either mail.contoso.com or autodiscover.contoso.com

Correct Answer:

Answer Area

To ensure high availability of web services, the certificate with the thumbprint 95764604705BD4C28E1E390ABA820AF7EB57E541 must be [answer choice].

Modified to include an additional service
Modified to include an additional namespace
Imported on another Client Access server in the same site

When a domain-joined client computer attempts to discover the Outlook Anywhere configuration settings, the AutoDiscover URI [answer choice].

must contain ex2.contoso.com
must contain autodiscover.contoso.com
can contain either mail.contoso.com or autodiscover.contoso.com

QUESTION 8

DRAG DROP

You need to recommend which tasks must be performed to meet the compliance requirement for the marketing department.

Which three actions should recommend?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Create a new default policy tag.	
Run the <b>Set-Mailbox</b> cmdlet.	
Create a new transport rule.	
Create a new retention policy tag.	
Run the <b>Start-ManagedFolderAssistant</b> cmdlet.	
Create a new retention policy.	

Correct Answer:

Actions	Answer Area
Create a new default policy tag.	Create a new retention policy tag.
	Create a new retention policy.
Create a new transport rule.	Run the <b>Set-Mailbox</b> cmdlet.
Run the <b>Start-ManagedFolderAssistant</b> cmdlet.	

QUESTION 9

You need to recommend a solution to meet the compliance requirement for the legal department. What should you include in the recommendation?

- A. A retention hold
- B. The Discovery Management management role group
- C. A litigation hold
- D. The Recipient Management management role group

Correct Answer: B

\*

Scenario: The legal department must be able to search for messages in all of the mailboxes.

\*

Administrators or users who are members of the Discovery Management role group can perform searches of mailboxes in the Exchange organization for data that meets specific criteria and can also configure litigation holds on mailboxes.

---

#### QUESTION 10

DRAG DROP

You need to create a federation trust for the planned organization relationship.

Which three actions should you perform?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Run the <b>New-FederationTrust</b> cmdlet.	
Run the <b>Get-FederatedDomainProof</b> cmdlet.	
Create a text (TXT) record.	
Run the <b>New-SharingPolicy</b> cmdlet.	
Run the <b>Get-ExchangeCertificate</b> cmdlet.	
Create a service location (SRV) record.	

Correct Answer:

Actions	Answer Area
	Run the <b>New-FederationTrust</b> cmdlet.
	Run the <b>Get-FederatedDomainProof</b> cmdlet.
	Create a text (TXT) record.
Run the <b>New-SharingPolicy</b> cmdlet.	
Run the <b>Get-ExchangeCertificate</b> cmdlet.	
Create a service location (SRV) record.	

**QUESTION 11**

You have an Exchange Server 2013 organization.

You purchase a Microsoft Office 365 subscription and configure a hybrid deployment.

The network contains an SMTP relay server named smarthost.contoso.com. The server is configured to use a certificate that has a subject name of smarthost.contoso.com.

All users have Microsoft Outlook 2013 installed on their client computer. Outlook 2013 is configured to connect to mail.contoso.com.

All Exchange servers have a certificate that has a subject name of mail.contoso.com.

You discover that email messages sent from on-premises users are not delivered to Office 365 recipients. You discover that the Send connector for Office 365 uses a smart host of smarthost.contoso.com.

You need to ensure that the on-premises users can send email messages to the Office 365 recipients.

Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

- A. Run the Hybrid Configuration Wizard again.
- B. Configure the Microsoft Exchange Online Protection (EOP) Send connector to use smarthost.contoso.com
- C. Configure the centralized mail transport option.
- D. Remove the smart host from the Send connector.
- E. Assign a certificate that has a subject name of smarthost.contoso.com to the Send connector.

Correct Answer: BD

A: Creating and configuring a hybrid deployment with the Hybrid Configuration wizard is now a single process in Microsoft Exchange Server 2013. First, the wizard creates the HybridConfiguration object in your on-premises Active Directory.

This Active Directory object stores the hybrid configuration information for the hybrid deployment and is updated by the Hybrid Configuration wizard. Next, the wizard gathers existing on-premises Exchange and Active Directory topology

configuration data, Office 365 tenant and Exchange Online configuration data, defines several organization parameters and then runs an extensive sequence of configuration tasks in both the on-premises and Exchange Online organizations.

E:

Note:

\*

By default, Microsoft Exchange Server 2013 doesn't allow you to send mail outside of your domain. To send mail

outside your domain, you need to create a Send connector.

\*

Use the Set-SendConnector cmdlet to modify a Send connector.

/ Parameters include TlsCertificateName

The TlsCertificateName parameter specifies the X.509 certificate to use with TLS sessions and secure mail. Valid input for this parameter is [I]ssuer[S]Subject. The Issuer value is found in the certificate's Issuer field, and the Subject value is

found in the certificate's Subject field. You can find these values by running the Get-ExchangeCertificate cmdlet.

## QUESTION 12

You manage an Exchange Server 2013 organization for an investment company at which brokers are restricted from communicating with market researchers. You need to prevent members of a group named AllBrokers from using email to

share confidential information with members of a group named AllResearchers. The solution must ensure that when an email message is rejected, the sender receives a custom notification of "Communication Not Permitted of Compliance Reasons".

What command should you use? To answer, select the appropriate options in the answer area.

Hot Area:

"Communications Restricted"

-BetweenMemberOf1 AllBrokers@contoso.com -BetweenMemberOf2 AllResearchers@contoso.com

"Communication Not Permitted for Compliance Reasons"

Correct Answer:

"Communications Restricted"

-BetweenMemberOf1 AllBrokers@contoso.com -BetweenMemberOf2 AllResearchers@contoso.com

"Communication Not Permitted for Compliance Reasons"
