**QUESTION 1**

You plan to deploy a data platform solution for 4 TB of data. The solution will be used to generate analytic reports during business hours only. All reports will be generated by using Microsoft Excel.

You need to recommend a data platform for the data. The solution must minimize costs and provide the highest read performance.

Which data platform should you recommend?

- A. Microsoft Azure SQL Data Warehouse
- B. Microsoft Azure Cosmos DB
- C. Microsoft Azure SQL Database
- D. Microsoft Azure Data Lake

Correct Answer: A

SQL Data Warehouse is a cloud-based Enterprise Data Warehouse (EDW) that leverages Massively Parallel Processing (MPP) to quickly run complex queries across petabytes of data. Use SQL Data Warehouse as a key component of a big data solution. Import big data into SQL Data Warehouse with simple PolyBase T-SQL queries, and then use the power of MPP to run high-performance analytics.
