QUESTION 1

HOTSPOT

You are preparing a Linux image for upload to Azure Stack.

You need to install the Microsoft Azure Linux Agent manually.

You install the python-setuptools.

Which command should you run next? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

```
sudo 

|         |
|---------|
| ▼       |
| apt-get |
| python3 |
| yum     |

 setup.py 

|                   |
|-------------------|
| ▼                 |
| install           |
| python-setuptools |
| update            |

 --register-service
```

Correct Answer:

Answer Area

```
sudo 

|         |
|---------|
| ▼       |
| apt-get |
| python3 |
| yum     |

 setup.py 

|                   |
|-------------------|
| ▼                 |
| install           |
| python-setuptools |
| update            |

 --register-service
```

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-linux#prepare-your-own-image>

QUESTION 2

You need to install the Azure Stack Development Kit. Telemetry must be turned off on the host. What should you do?

- A. Boot from the CloudBuilder.vhdx file, modify the registry, and then run the asdk-installer.ps1 script.
- B. Boot from the CloudBuilder.vhdx.file, run the asdk-installer.ps1 script, and then run the azurestackdevelopmentkit.exe command.
- C. Mount the CloudBuilder.vhdx file on a Hyper-V host. Run the Add-AzsRegistration cmdlet. Start CloudBuilder.vhdx.

D. Mount the CloudBuilder.vhdx file on a Hyper-V host. Run the azurestackdevelopmentkit.exe command. Start CloudBuilder.vhdx.

Correct Answer: A

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-telemetry>

QUESTION 3

You have an Azure Stack integrated system that hosts several tenants.

You delete a storage account that uses a large amount of data.

You discover that the storage account continues to use disk space on the system.

You need to ensure that the disk space is available to the tenants as quickly as possible.

What should you do first?

- A. From the Azure Stack administrator portal, click Reclaim space.
- B. From PowerShell, migrate the blob containers in the storage account to a new share.
- C. From PowerShell, run the Out-Default cmdlet.
- D. From the Azure Stack administrator portal, set Retention period for deleted storage accounts (days) to 0.

Correct Answer: A

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-manage-storage-accounts>

QUESTION 4

You have two Azure Stack integrated systems name Stack1 and Stack2.

You create an Azure Resource Manager template that successfully deploys to Stack1.

You attempt to deploy the template to Stack2, but the deployment fails.

What is a possible cause of the deployment failure?

- A. Stack1 has Azure Marketplace syndication disabled and Stack2 has Azure Marketplace syndication enabled.
- B. The template was deployed to Stack2 by using Microsoft Visual Studio.
- C. The API version used in the template is a later version than the API version available on Stack2.
- D. Stack1 has Azure Marketplace syndication enabled and Stack2 has Azure Marketplace syndication disabled.

Correct Answer: C

References: <https://docs.microsoft.com/en-us/azure/azure-stack/user/azure-stack-considerations#version-requirements>

**QUESTION 5**

NOTE: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack integrated system that runs in a connected environment.

You need to recommend an interval for installing Microsoft software update packages to Azure Stack. The solution must ensure that you can receive Microsoft support.

Solution: You recommend that Microsoft software updates be installed every 12 months.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

For your Azure Stack deployment to remain in support, it must run the most recently released update version or run either of the two preceding update versions.

Microsoft will release update packages for Azure Stack integrated systems on a regular cadence that will typically fall on the fourth Tuesday of every month.

Thus to remain in support you must be running one of the last three update versions and, as an update version is released every month, you need to install updates at least every three months.

References:

<https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-servicing-policy> <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-updates>

QUESTION 6

You deploy an Azure Stack integrated system.

You register the deployment by using a Cloud Solution Provider (CSP) subscription.

You need to review the resource consumption of all the Azure Stack tenants.

Which portal should you use?

- A. the Azure Enterprise Agreement (EA) portal
- B. Microsoft Partner Center

- C. Azure Account Center
- D. the Azure Stack administrator portal

Correct Answer: B

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-csp-ref-infrastructure>

QUESTION 7

You have an Azure Stack integrated system that uses the external domain name of west.fabrikam.com.

You plan to create an Azure Marketplace package.

Which API endpoint must you use to publish the package?

- A. management.west.fabrikam.com
- B. <https://graph.windows.net/>
- C. <https://graph.west.fabrikam.com/>
- D. mydomain.onmicrosoft.com

Correct Answer: A

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-marketplace-publisher>

QUESTION 8

You manage an Azure Stack integrated system.

You need to identify the IP address of the external time server that was configured during Azure Stack provisioning.

What should you do?

- A. From the Azure Resource Manager endpoint, run Get-AzsUsageConnection.
- B. From the privileged endpoint, run Get-AzureStacklog.
- C. From the Azure Resource Manager endpoint, run Get-AzsResourceProviderManifest.
- D. From the privileged endpoint, run Get-AzureStackStampInformation.

Correct Answer: D

QUESTION 9

You have an Azure stack integrated system.

You already have several Microsoft Azure Marketplace images downloaded.

Several tenants request that a Microsoft SQL Server 2014 Service Pack 2 (SP2) Enterprise on Windows Server 2012 R2 image be available in the Azure Stack Marketplace.

You need to meet the request by using the least amount of administrative effort.

What should you do?

- A. From Azure Marketplace, deploy a SQL Server 2014 SP2 Enterprise on Windows Server 2012 R2 image, copy the VHD file to Azure Stack, and then publish the image to the Azure Stack Marketplace.
- B. Create a new virtual machine that runs Windows Server 2012 R2, install SQL Server 2014 SP2 Enterprise, and then publish the image to the Azure Stack Marketplace.
- C. From Marketplace Management, click Add from Azure, and then download the SQL Server 2014 SP2 Enterprise on Windows Server 2012 R2 image.
- D. Create a new virtual machine image based on an existing SQL Server 2014 SP2 Enterprise virtual machine, upload the image to the Azure Stack Marketplace, and then publish the image for all users.

Correct Answer: C

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-download-azure-marketplace-item>

QUESTION 10

You have an Azure Stack integrated system that uses Microsoft Azure Active Directory (Azure AD) for authentication. The system uses an external domain named cloud.contoso.com.

You plan to provide tenant users with the ability to provision App Services and to use Kudu to develop the App Services.

You need to create the Azure AD application for the planned deployment.

What should you do?

- A. Run the Add-AzsRegistration cmdlet. From <https://portal.cloud.contoso.com>, create an App Service offer.
- B. Run the Create-AADIdentityApp.ps1 script. From <https://portal.azure.com>, modify the permissions of the Azure AD application.
- C. Run the Add-AzsRegistration cmdlet. From <https://portal.azure.com>, create a new App Service Environment.
- D. Run the Create-AADIdentityApp.ps1 script. From <https://portal.cloud.contoso.com>, create an App Service offer.

Correct Answer: D

QUESTION 11

NOTE: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack integrated system that runs in a connected environment.

You need to recommend an interval for installing Microsoft software update packages to Azure Stack. The solution must ensure that you can receive Microsoft support.

Solution: You recommend that Microsoft software updates be installed monthly.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

For your Azure Stack deployment to remain in support, it must run the most recently released update version or run either of the two preceding update versions.

Microsoft will release update packages for Azure Stack integrated systems on a regular cadence that will typically fall on the fourth Tuesday of every month.

Thus to remain in support you must be running one of the last three update versions and, as an update version is released every month, you need to install updates at least every three months.

QUESTION 12

HOTSPOT

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the

scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a main office in New York and a branch office in Toronto. Each office has a dedicated connection to the Internet. Each office has a firewall that uses inbound and outbound rules.

The company has an on-premises network that contains several datacenters. The datacenters contain multiple hypervisor deployments, including Windows Server 2016 Hyper-V. The network uses Microsoft System Center for monitoring and

Windows Azure Pack for self-service.

The company has a Microsoft Azure subscription that contains several workloads. You use Azure Resource Manager templates and other automated processes to create and manage the resources in Azure.

You have an Azure Stack integrated system in the New York office. The company has a development team in the Toronto office and a development team in the New York office. The system has an offer named Offer1. Several tenants have

subscriptions based on Offer1.

You have a Hyper-V host named Server1 that runs Windows Server 2012 R2. Server1 is used for testing. The hardware on Server1 can support the deployment of the Azure Stack Development Kit.

You have a Generation 1 virtual machine named VM1 that runs Windows Server 2012 R2. VM1 is deployed to a Hyper-V host that runs Windows Server 2016. VM1 has a fixed size disk named VM1.vhdx that is 200 GB.

End of repeated scenario.

You need to provide a new user with the ability to generate support session tokens when troubleshooting Azure Stack issues with Microsoft Support.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Establish a PowerShell remoting session to :

<input type="checkbox"/> A hardware lifecycle host
<input type="checkbox"/> A network controller
<input type="checkbox"/> A privileged endpoint
<input type="checkbox"/> An infrastructure management controller

Run the following cmdlet:

<input type="checkbox"/> New-ADServiceAccount
<input type="checkbox"/> New-AzureBridgeServicePrincipal
<input type="checkbox"/> New-CloudAdminUsers
<input type="checkbox"/> New-LocalUser

Correct Answer:

Answer Area

Establish a PowerShell remoting session to :

- A hardware lifecycle host
- A network controller
- A privileged endpoint**
- An infrastructure management controller

Run the following cmdlet:

- New-ADServiceAccount
- New-AzureBridgeServicePrincipal
- New-CloudAdminUsers
- New-LocalUser**

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-privileged-endpoint>
