**QUESTION 1**

You are designing a SharePoint 2010 application. You need to design the application so that it meets the following requirements:

- .Content authors must be allowed to create product pages.
- .Content authors also must be able to add Web Parts to customize the page.
- .Product pages must allow the content author to select a value from a Product Type field as defined in an existing site column.

Which approach should you recommend?

- A. Create an application page that includes the Product Type field and Web Part zones.
- B. Create a page layout that includes the Product Type field and Web Part zones.
- C. Create a static page that includes the Product Type field and Web Part zones.
- D. Create a Web Part page that includes the Product Type field and Web Part zones.

Correct Answer: B

QUESTION 2

You are designing a custom application to automate the deployment of SharePoint 2010 solutions. You need to ensure that the application uses Windows PowerShell cmdlets. Which cmdlet sequence should your application use?

- A. Add-SPSolution, then Install-SPSolution.
- B. Add-SPUserSolution, then Install-SPUserSolution.
- C. Install-SPSolution, then Add-SPSolution.
- D. Install-SPUserSolution, then Add-SPUserSolution.

Correct Answer: B

QUESTION 3

You are designing a solution on a SharePoint 2010 intranet site where administrative access to the SharePoint 2010 application server is not available. You need to ensure that site usage information is collected on search statistics for all the sites on the farm.

Which approach should you recommend?

- A. Create a Windows service and schedule it to collect the search statistics according to a specified schedule.
- B. Create a SharePoint sandboxed solution to collect the search statistics.
- C. Write a console application to collect search statistics. Create a timer job to run the application according to a specified schedule.
- D. Write a console application to collect search statistics. Use Windows Task Scheduler to run the application at regular intervals.

Correct Answer: C

QUESTION 4

You work for a manufacturer who needs to advertise its catalog of products online using a SharePoint 2010 publishing site. A page author will create a Web page for every type of product the manufacturer makes. Each Web page will display

the name of the material the product is made from and a photo of the product. You need to design this site to satisfy the following requirements:

.When the page author creates a new Web page for a product, the author should only be able to choose from a list of five materials.

.The manufacturer's marketing manager should be able to add to the list of materials at any time without assistance from the IT department.

.Users can choose to view the site in English, German, or Spanish. A user should see the name of the product material in only the language they have selected.

.The URL of the page should remain the same for each type of product regardless of the language the user has selected.

Which approach should you recommend?

- A. Create a site column of type "Choice" for English, German, and French, and add the translated list of materials to the site column for each language. Add all three site columns to the page layout. Give the marketing manager permission to edit the Choice site column values for each language.
- B. Create a resource file for each language and install the resource file using a SharePoint solution package. Show the marketing manager how to edit the resource file.
- C. Use the Managed Metadata Service to create a set of terms used for product materials and translate each term into English, German, and Spanish. Add a site column mapped to the term set to the page layout. Make the marketing manager the term set owner.
- D. For each type of product, create three Web pages, one for each language. Give the marketing manager permission to edit all the product Web pages.

Correct Answer: C

**QUESTION 5**

You are designing a solution for a SharePoint 2010 site. You need to design a solution that includes:

.Custom pages to add, view, and update list items. .Custom workflows with code on list items.

Which approach should you recommend?

- A. Design a sandboxed solution that includes workflows with code and custom application pages.
- B. Design multiple sandboxed solutions that include workflows with code and custom application pages.
- C. Design a farm solution that includes workflows with code and custom application pages.
- D. Design a farm solution that includes workflows with code. Develop list application pages and use the Stsadm tool to deploy them manually to the bin folder of the Web application.

Correct Answer: C

QUESTION 6

You are designing a SharePoint 2010 solution. The solution includes the rendering of a highly interactive control that must allow the following functionality:

.Fading items in and out.

.Dragging items around the display.

.Seamlessly updating information on the server without affecting other items on the page.

You need to design the interactive control according to these requirements.

What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

- A. Use cascading style sheets (CSS) to render the graphical enhancements. Use AJAX to post the client-side information back to the server.
- B. Use client-side scripting to render the graphical enhancements. Use AJAX to post the client-side information back to the server.
- C. Use Silverlight to render the graphical enhancements. Use Microsoft Windows Communication Foundation (WCF) to post the client-side information back to the server.
- D. Use a visual Web Part to render the graphical enhancements. Raise custom events on the client side to post information back to the server.

Correct Answer: BC

**QUESTION 7**

You are designing a SharePoint 2010 application. You need to provision a custom document converter for the application. Which scope should you design?

- A. farm scoped
- B. site scoped
- C. Web scoped
- D. WebApplication scoped

Correct Answer: D

QUESTION 8

You work for a software company that sells Web Parts to customers. You designed the first version of a Web Part named Weather 1.0. The company has already sold several hundred licenses of the Web Part. You designed a new solution package for Weather 2.0.

Some customers who are already using Weather 1.0 will install Weather 2.0 in the same Web application as Weather 1.0. You need to design your package so that the functionality of Weather 1.0 will not be affected by the installation of Weather 2.0 in the same Web application.

Which approach should you recommend?

- A. Use the same assembly name and namespace for Weather 2.0 that you used for Weather 1.0. Create a new .webpart file. Increment the version number in the .webpart file.
- B. Use the same assembly name and namespace, but increment the version number of the assembly package. Use the same .webpart file that you used for Weather 1.0.
- C. Use the same assembly name and namespace, but increment the version number of the assembly package. Configure assembly binding redirection from version 1.0 of the assembly to version 2.0. Use the same .webpart file that you used for Weather 1.0.
- D. Use the same assembly name and namespace, but increment the version number of the assembly package. Create a new .webpart file.

Correct Answer: D

QUESTION 9

You are designing a SharePoint 2010 application that has more than 7,000 items in a list named Customers. Resource throttling is used to specify a list view threshold of 5,000. You have a requirement to ensure that users in a domain group named Customer Auditors are allowed to perform operations on all items via a custom application. You need to design the application to meet the requirements.

Which approach should you recommend?

- A. Grant Full Read permissions to the Customer Auditors group.
- B. Add the Customer Auditors group to the Site Owners group.
- C. Add the Customer Auditors group to the Administrators group on each Web front-end server.
- D. Add the Customer Auditors group to the Administrators group on the Central Administration server.

Correct Answer: C

QUESTION 10

You are designing several new custom applications for a SharePoint 2010 farm. One of the current applications contains a Web Part with code that requires substantial CPU and memory resources. The SharePoint farm administrator wants to ensure that new applications containing custom code do not degrade the performance of the Web front-end (WFE) servers when they are deployed to the SharePoint farm. You need to enable the administrator to perform the following tasks:

.To configure the applications to run in isolation mode .To control the resource usage of custom SharePoint applications by assigning the execution load to specified servers and perform load-balancing of the WFE servers .To limit the resources allotted to specific applications without impacting overall farm performance and stability.

Your design must meet all these requirements.

Which approach should you recommend?

- A. Design sandboxed solutions to deploy on the SharePoint 2010 farm. Specify that the execution of user code is to run on the same WFE server as the server that received the Web request.
- B. Design sandboxed solutions to deploy on the SharePoint 2010 farm. Specify that the execution of user code is to run on any available WFE server that is running the User Code Service.
- C. Design farm-scoped solutions and deploy them in the farm. Ensure that the SharePoint administrator will uninstall solutions if WFE servers are running at or near 100% CPU utilization.
- D. Design user controls, load them into Web Parts, and deploy them as features in the farm. Ensure that the SharePoint administrator will deactivate these features in the farm if WFE servers are running at or near 100% CPU utilization.

Correct Answer: B

QUESTION 11

You are designing a SharePoint 2010 intranet site. Your design must:

- .Specify the manner in which to store and read custom configuration settings.
- .Use a standard user interface to allow the configuration settings to be created or changed.

You need to design the solution at the site collection and site levels to meet these requirements.

Which approach should you recommend?

- A. Use the property bag to store custom configuration settings.
- B. Use the hierarchical object store to store custom configuration settings
- C. Use SharePoint lists to store the custom configuration settings
- D. Add custom configuration settings in the web.config file to display the settings

Correct Answer: C

QUESTION 12

You are designing a SharePoint 2010 application. You have a requirement to deploy content between servers that experience frequent interruptions in connectivity. You need to design a strategy for exporting the content to a package and transporting the package to meet the requirements.

Which approach should you recommend?

- A. Create a job to export the content to a package, and then create a job to transport the package.
- B. Create a path to export the content to a package, and then create a job to transport the package.
- C. Use the Content Migration API to export the content to a package, and then create a path to transport the package.
- D. Use the Content Migration API to export the content to a package, and then manually transport the package.

Correct Answer: D

QUESTION 13

You are designing a solution package for an application project, which has several types of SharePoint 2010 artifacts. Your project contains a Web Part, features, list definitions, assemblies, customized ASPX pages, and workflows. You have

the following requirements:

- .You must ensure the security and manageability of the SharePoint applications.
- .SharePoint administrators must enforce quota limits on resources consumed. Based on your analysis, the Web Part will exceed the limit.
- .You must deploy all of the artifacts with the fewest solutions possible. You need to create a deployment plan that meets these requirements.

Which approach should you recommend?

- A. Create one solution package that contains all of the artifacts in the development project.

B. Create two solution packages: .A farm-scoped solution that contains the Web Part .A solution that contains all the remaining artifacts in the project

C. Create two solution packages: .A sandboxed solution containing the Web Part .A solution that contains all the remaining artifacts in the project

D. Create three solution packages: .A solution for list definitions .A solution containing the Web Part and its related assemblies .A solution for customized ASPX pages and workflows

Correct Answer: C

QUESTION 14

You are designing an architectural firm's SharePoint 2010 environment. In order for the firm to bid on a new project, it must submit a detailed proposal that specifies exactly what kind of services they will offer and how much those services will cost. Different people must be able to work on separate parts of the proposal document simultaneously. The document must be generated quickly in order to increase the firm's chances of getting the project. Employees who are working on the document are using Microsoft Word 2010. Your design needs to satisfy these requirements using no custom development.

Which approach should you recommend?

A. Add the new Word document to a SharePoint document library. Configure a sequential workflow with the built-in document approval workflow, which allows each author to add and edit text until the document is complete.

B. Add the new Word document to a SharePoint document library and allow the appropriate people to co-author the document until it is complete.

C. Create a SharePoint list for the document, where each list item corresponds to a section of the document. Allow people to add one or more sections of the document to the list. Create a Word add-in that retrieves content from the list and uses OpenXML to generate a Word document.

D. Create an external database to store sections of the document. Create an external SharePoint list that connects to the database using Business Connectivity Services. Allow people to add one or more sections of a document to the external list. Create a Word add-in that retrieves content from the database and uses OpenXML to generate a Word document.

Correct Answer: B

QUESTION 15

You are designing a SharePoint 2010 application that connects to an external Microsoft SQL Server database. You have the following requirements:

.Server administrators can add and edit connection strings at the Web application level.

.SharePoint users must not be able to view or modify sensitive data in the connection strings.

.Server administrators can add or change the connection strings declaratively with no custom UI required.

.The connection strings can be modified programmatically without redeploying code.

You need to create a plan to store connection strings for the database within the SharePoint system.

Which approach should you recommend?

- A. Add or change the connection strings in the web.config file.
- B. Use a hierarchical object store configuration approach to store the connection strings.
- C. Use a property bag configuration approach to store the connection strings.
- D. Use SharePoint lists to store the connection strings.

Correct Answer: A
