**QUESTION 1**

Note: This question is part of a series of questions that use the same set of answer choices. Each answer choice may be used once, more than once, or not at all. You have a computer named Computer1 that has storage configured as shown in the following table.

Disk name	Size	Storage pool name
Disk1	200 GB	Pool1
Disk2	100 GB	Pool1
Disk3	500 GB	Pool1
Disk4	500 GB	Pool2
Disk5	500 GB	Pool2
Disk6	80 GB	None
Disk7	100 GB	Pool3
Disk8	100 GB	Pool3

Pool1 contains a storage space named Space1 that is 300 GB. Pool3 contains a storage space named Space2 that is 100 GB. Pool2 is empty. You discover that Disk2 experiences physical errors.

You need to ensure that all of the data in Space1 is stored on other disks in the storage pool only.

What should you use?

- A. Add-PhysicalDisk
- B. Diskpart
- C. New-VirtualDisk
- D. Remove-PhysicalDisk
- E. Resize-VirtualDisk
- F. Set-StoragePool
- G. Subst
- H. Update-Disk

Correct Answer: F

[https://technet.microsoft.com/en-us/library/hh848697\(v=mps.630\).aspx](https://technet.microsoft.com/en-us/library/hh848697(v=mps.630).aspx)

QUESTION 2

Your network contains a single Active Directory domain. The domain contains two computers named Computer1 and Computer2.

From Computer1, you need to view the installed devices and their associated drivers on Computer2.

What should you use?

- A. the Get-PnpDevice cmdlet
- B. the Get-WindowsDriver cmdlet
- C. the Get-OdbcDriver cmdlet
- D. the driverquery.exe command

Correct Answer: D

<https://blogs.technet.microsoft.com/askperf/2011/10/21/two-minute-drill-driverquery-exe/>

QUESTION 3

Note: This question is part of a series of a questions that use the same set of answer choices. Each answer choice may be used once, more than once, or not at all. You have a computer named Computer1 that has storage configured as shown in the following table.

Disk name	Size	Storage pool name
Disk1	200 GB	Pool1
Disk2	100 GB	Pool1
Disk3	500 GB	Pool1
Disk4	500 GB	Pool2
Disk5	500 GB	Pool2
Disk6	800 GB	None
Disk7	100 GB	Pool3
Disk8	100 GB	Pool3

Pool1 contains a storage space named Space1 that is 300 GB. Pool3 contains a storage space named Space2 that is 100 GB. Pool2 is empty.

You need to configure Space2 to be 2 TB.

What should you use?

- A. Add-PhysicalDisk
- B. Diskpart
- C. New-VirtualDisk
- D. Remove-PhysicalDisk
- E. Resize-VirtualDisk

F. Set-StoragePool

G. Subst Update-Disk

Correct Answer: E

<https://technet.microsoft.com/en-us/library/hh848658.aspx>

QUESTION 4

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the

solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You have a computer named Computer1 that runs Windows 10.

File History is turned on.

The user of Computer1 reports that previous versions of D:\Folder\File1.doc are unavailable from the Previous Versions tab.

You need to ensure that the previous versions of the file are created.

Solution: Add D:\Folder\to the Documents library.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

<https://support.microsoft.com/en-us/help/17128/windows-8-file-history>

QUESTION 5

Note: This question is part of a series of questions that use the same set of answer choices. Each answer choice may be used once, more than once, or not at all.

Your network contains a single Active Directory domain. The domain contains computers that run Windows 10 Enterprise.

The computers are configured as shown in the following table:

Computer name	Primary user	Computer type
PC_User1	User1	Laptop
PC_User2	User2	Laptop
PC_User3	User3	Tablet

When User1 works remotely, the user fails to access shared folders on the corporate network.

When User 2 and User3 work remotely, they successfully connect to the shared folders on the corporate network.

You need to ensure that User1 can connect to the shared folders without user interaction.

What should you do?

- A. Click Turn on password protected sharing.
- B. Disable Network Discovery.
- C. Modify the Profile settings of an incoming firewall rule.
- D. Run the Add-VpnConnectionTriggerApplication cmdlet.
- E. Run the New-NetFirewallRule cmdlet and specify the -Direction Outbound parameter.
- F. Run the New-VpnConnection cmdlet.
- G. Run the Set-NetConnectionProfile cmdlet.
- H. Run the Set-VPNConnection cmdlet

Correct Answer: D

[https://technet.microsoft.com/en-us/library/dn296460\(v=wps.630\).aspx](https://technet.microsoft.com/en-us/library/dn296460(v=wps.630).aspx)

QUESTION 6

Note: This question is part of a series of questions that use the same set of answer choices. Each answer choice may be used once, more than once, or not at all. You have a computer named Computer1 that has storage configured as shown in the following table:

Disk name	Size	Storage pool name
Disk1	200 GB	Pool1
Disk2	100 GB	Pool1
Disk3	500 GB	Pool1
Disk4	500 GB	Pool2
Disk5	500 GB	Pool2
Disk6	800 GB	None
Disk7	100 GB	Pool3
Disk8	100 GB	Pool3

Pool1 contains a storage space named Space1 that is 300 GB.

Pool3 contains a storage space named Space2 that is 100 GB.

Pool2 is empty.

You need to add Disk7 to Pool1.

What should you use first?

- A. Add-PhysicalDisk
- B. Diskpart
- C. New-VirtualDisk
- D. Remove-PhysicalDisk
- E. Resize-VirtualDisk
- F. Set-StoragePool
- G. Subst
- H. Update-Disk

Correct Answer: D

[https://technet.microsoft.com/en-us/library/hh848697\(v=wps.630\).aspx](https://technet.microsoft.com/en-us/library/hh848697(v=wps.630).aspx)

QUESTION 7

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

Your network contains a single Active Directory domain named adatum.com.

The network contains five servers configured as shown in the following table:

Server name	Domain/workgroup	Role
DC1	Adatum.com	Domain controller
DC2	Adatum.com	Domain controller
Server1	Adatum.com	Member server
Server2	Adatum.com	Member server
Test Server	Workgroup	File server

All of the servers run Windows Server 2012 R2.

Test_Server has a shared folder named ShareA. Only local users have permissions to ShareA.

The network contains a mainframe computer that is administered by using the Telnet protocol.

The domain contains four client computers configured as shown in the following table:

Computer name	Primary user
Computer1	User1
Computer2	User2
Computer3	User3
Computer4	User4

All of the client computers run the 64-bit version of Windows. User3 frequently accesses ShareA. Remote Desktop is enabled on Computer4. Your company identifies the following requirements.

- Ensure that you can test unsigned device drivers on Computer1
- Enable Credential Guard on Computer2.
- Run commands and cmdlets remotely on computer2.
- Configure User Account control (UAC) on Computer3 to prompt administrators for credentials when elevated privileges are required.
- Ensure that User1 can view and interact with a desktop session of User3.
-

Ensure that User2 can use Telnet to manage the mainframe.

•

Ensure that User4 can use Remote Desktop to access Computer4 remotely.

End of repeated scenario.

You need to meet the requirement of User4.

What should you do?

A.

Install a Universal Windows Platform (UWP) application.

B.

Modify the settings of a firewall rule.

C.

Install a Windows feature.

D.

Modify the membership of a local group.

Correct Answer: B

<https://support.microsoft.com/en-us/help/17463/windows-7-connect-to-another-computer-remote-desktop-connection>

QUESTION 8

Note: This question is part of a series of questions that use the same set of answer choices. Each answer choice may be used once, more than once, or not at all.

You have a computer named Computer1. Computer1 has a virtual hard disk (VHD) named Disk1.vhcx. Windows is installed on Disk1.vhdx. disk1.vhdx is visible in File Explorer as drive E.

You need to configure Computer1 to start from VHDX. Hardware virtualization must not be available when Computer1 starts from VHDX.

What should you run?

A. Add-Windows Image

B. bcdboot.exe

C. bcdedit.exe

D. bootcfg.exe

E. bootim.exe

F. bootsect.exe

G. diskpart.exe

H. Expand-Windows Image

Correct Answer: B

<https://msdn.microsoft.com/en-us/windows/hardware/commercialize/manufacture/desktop/boot-to-vhd--native-boot--add-a-virtual-hard-disk-to-the-boot-menu>

QUESTION 9

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the

solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You have a computer named Computer1 that runs Windows 10.

File History is turned on.

The user of Computer1 reports that previous versions of D:\Folder\File1.doc are unavailable from the Previous Versions tab.

You need to ensure that the previous versions of the file are created.

Solution: Create a backup of drive D by using Backup and Restore (Windows 7).

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

<http://www.howtogeek.com/209080/how-to-restore-previous-versions-of-a-file-on-any-operating-system/>

QUESTION 10

A company has client devices that run Windows 10 Enterprise. A line-of-business (LOB) app requires that Windows feature updates are tested for up to one year before being deployed. Company policy states that all devices must be updated

at least once per year.

You need to ensure that Windows feature updates meet the LOB app requirements.

Which update path should you configure on client devices?

- A. Long-Term Servicing Channel . Slow Ring . Semi-Annual Channel
- B. Release Preview Ring

Correct Answer: B

References: <https://docs.microsoft.com/en-us/windows/deployment/update/waas-overview#servicing-tools>

QUESTION 11

You are in the process of planning the deployment of Windows 10 Enterprise for an organization.

Most of the devices are used by employees to perform their daily tasks. All devices have Microsoft Office installed. A few specific devices are used to control equipment in the manufacturing process. The application used by these systems has only been tasked to work with Windows 10 Enterprise build 1703. You need to select the appropriate servicing model for the manufacturing systems so that they are not updated automatically with new Windows 10 build versions. You must have the option of updating the manufacturing systems to new

builds after they have been thoroughly tested by the IT team. Which servicing model should you implement?

- A. Slow Ring
- B. Release Preview Ring
- C. Long-Team Servicing Channel
- D. Semi-Annual Channel

Correct Answer: C

QUESTION 12

You have a computer named Computer1 that has the Hyper V feature enabled.

You have two virtual machines named VM1 and VM2 hosted on Computer1. VM1 can communicate with VM2 and Computer1. VM1 fails to connect to the Internet- Computer1 can connect to the Internet.

You need to ensure that VM1 can connect to the Internet.

What should you do?

- A. On Computer 1, modify the network settings.
- B. Enable port mirroring on VM1.
- C. Create an external virtual switch and configure VM1 to use the switch.
- D. On VM1, select Enable virtual LAN identification.

Correct Answer: C
