QUESTION 1

Your company has a main office and 20 branch offices. All of the offices connect to each other by using a WAN link. The network contains an Active Directory forest named contoso.com. The forest contains a domain for each office.

The forest root domain contains all of the server resources.

Each branch office contains two domain controllers for the branch office domain and one domain controller for the contoso.com domain.

Each branch office has a support technician who is responsible for managing the accounts of their respective office only.

You recently updated all of the WAN links to high-speed WAN links. You need to recommend changes to the Active Directory infrastructure to meet the following requirements:

Reduce the administrative overhead of moving user accounts between the offices. Ensure that the support technician in each office can manage the user accounts of their respective office. What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

A. Create a new child domain named corp.contoso.com. Create a shortcut trust between each child domain and corp.contoso.com.

B. Create shortcut trusts between each child domain. In the main office, add a domain controller to each branch office domain.

C. Move all of the user accounts of all the branch offices to the forest root domain. Decommission all of the child domains.

D. Create a new forest root domain named contoso.local. Move all of the user accounts of all the branch offices to the new forest root domain. Decommission all of the child domains.

Correct Answer: C

QUESTION 2

Your network contains servers that run Windows Server 2012. The network contains two servers named Server1 and Server2 that are connected to a SAS storage device. The device only supports two connected computers.

Server1 has the iSCSI Target Server role service installed. Ten application servers use their iSCSI Initiator to connect to virtual disks in the SAS storage device via iSCSI targets on Server1.

Currently, Server2 is used only to run backup software.

You install the iSCSI Target Server role service on Server2.

You need to ensure that the iSCSI targets are available if Server1 fails.

Which five actions should you perform?

To answer, move the five appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Add the iSCSI Target Server cluster role.	
Create a cluster.	
Install the Failover Clustering feature.	
Install the Network Load Balancing (NLB) feature.	
Reconfigure the iSCSI Initiator settings.	
Install the DFS Replication role service.	
Create iSCSI targets.	

Correct Answer:

Actions	Answer Area
	Install the Failover Clustering feature.
	Create a cluster.
	Add the iSCSI Target Server cluster role.
	Create iSCSI targets.
Install the Network Load Balancing (NLB) feature.	
	Reconfigure the iSCSI Initiator settings.
Install the DFS Replication role service.	

QUESTION 3

You have a small HyperV cluster built on two hosts that run Windows Server 2012 R2 HyperV. You manage the virtual infrastructure by using System Center Virtual Machine Manager 2012. Distributed Key Management is not installed. You have the following servers in the environment:

Server name	Role
DC1	Active Directory Domain Services domain controller
HYPERV1	Hyper-V host with 40 virtual machines
HYPERV2	Hyper-V host with 25 virtual machines
SQL1	SQL Server 2012 database
DPM1	Data Protection Manager (DPM) server
VMM1	Virtual Machine Manager (VMM) 2012
FILESERVER1	File server, shared folders
FILESERVER2	File server, VMM Library Server

You have the following requirements:

You must back up virtual machines at the host level.

You must be able to back up virtual machines that are configured for live migration.

You must be able to restore the entire VMM infrastructure.

You need to design and implement the backup plan.

What should you do?

- A. Run the following Windows PowerShell command: Set DPMGlobalPropertyDPMServerName DPMKnownVMMServers VMM1
- B. Install the DPM console on VMM1.
- C. Run the following Windows PowerShell command: CheckpointVM Name DPMI ComputerName SQL1
- D. Configure backup for all disk volumes on FILESERVER1.

Correct Answer: A

QUESTION 4

Your network contains a Microsoft System Center 2012 Virtual Machine Manager (VMM) server named Server1.

You use Server1 to manage 20 HyperV hosts.

The network also contains five Citrix XenServer virtualization hosts. You need to recommend which installation is required to manage the XenServer servers from Server1.

What should you recommend installing?

- A. The Citrix XenServer Microsoft System Center Integration Pack on the Citrix XenServer hosts
- B. The Citrix XenServer Microsoft System Center Integration Pack on Serverl
- C. Citrix Essentials for HyperV on Serverl
- D. Citrix Essentials for HyperV on the Citrix XenServer hosts

Correct Answer: A

QUESTION 5

What method should you use to deploy servers?

- A. WDS
- B. AIK
- C. ADK
- D. EDT

Correct Answer: A

QUESTION 6

Your network contains an Active Directory domain named contoso.com.

Your company has an enterprise root certification authority (CA) named CA1. You plan to deploy Active Directory Federation Services (AD FS) to a server named Serverl.

The company purchases a Microsoft Office 365 subscription.

You plan to register the company's SMTP domain for Office 365 and to configure single signon for all users. You need to identify which certificate or certificates are required for the planned deployment. Which certificate or certificates should

you identify? (Each correct answer presents a complete solution. Choose all that apply.)

- A. a server authentication certificate that is issued by a trusted thirdparty root CA and that contains the subject name serverl.contoso.com
- B. a server authentication certificate that is issued by CA1 and that contains the subject name Serverl
- C. a server authentication certificate that is issued by a trusted thirdparty root CA and that contains the subject name Serverl
- D. a server authentication certificate that is issued by CA1 and that contains the subject name serverl.contoso.com
- E. selfsigned server authentication certificates for serverl.contoso.com

Correct Answer: DE

QUESTION 7

Your network contains an Active Directory domain named contoso.com. The domain contains four servers on a test network. The servers are configured as shown in the following table.

Server name	Role
Server1	Hyper-V
Server2	File and Storage Services
Server3	File and Storage Services
Server4	File and Storage Services

Server1 uses the storage shown in the following table.

Drive name	Type
C	Locally attached IDE disk
D	Locally attached SCSI disk
E	Tiered storage space from locally attached SCSI and S. drives

You perform the following tasks:

On Server2, you create an advanced SMB share named Share2A and an applications SMB share named Share2B.

On Server3, you create an advanced SMB share named Share3.

On Server4, you create an applications SMB share named Share4.

You add Server3 and Server4 to a new failover cluster named Clus1.

On Clus1, you configure the File Server for general use role, you create a quick SMB share named Share5A, and then you create an applications SMB share named Share5B.

You plan to create a failover cluster of two virtual machines hosted on Server1. The clustered virtual machines will use shared .vhdx files.

You need to recommend a location to store the shared .vhdx files.

Where should you recommend placing the virtual hard disk (VHD)?

- A. \\Server3\Share3
- B. \\Server2\Share2B
- C. \\Clus1\Share5B
- D. \\Server4\Share4

Correct Answer: C

QUESTION 8

Your network contains an Active Directory domain named contoso.com. The functional level of the domain and the forest is Windows Server 2008 R2.

All domain controllers run Windows Server 2008 R2.

You plan to deploy a new line-of-business application named App1 that uses claims-based authentication. You need to recommend changes to the network to ensure that Active Directory can provide claims for App1. What should you include

in the recommendation? (Each correct answer presents part of the solution. Choose all that apply.)

- A. From the properties of the computer accounts of the domain controllers, enable Kerberos constrained delegation.
- B. From the Default Domain Controllers Policy, enable the Support for Dynamic Access Control and Kerberos armoring setting.
- C. Deploy Active Directory Lightweight Directory Services (AD LDS).
- D. Raise the domain functional level to Windows Server 2012.
- E. Add domain controllers that run Windows Server 2012.

Correct Answer: BE

QUESTION 9

You have a server named Server1 that runs Windows Server 2012. Server1 has the DNS Server server role installed. You need to recommend changes to the DNS infrastructure to protect the cache from cache poisoning attacks. What should you configure on Server1?

- A. DNS cache locking
- B. The global query block list
- C. DNS Security Extensions (DNSSEC)
- D. DNS devolution

Correct Answer: A

QUESTION 10

You need to recommend which Certificate services role service must be deployed to the perimeter network. The solution

must meet the security requirements. Which Certificate services role services should you recommend?

- A. Online Responder and Network Device Enrollment service
- B. Online Responder and Certificate Enrollment Web service
- C. Certificate Enrollment Web service and Certificate Enrollment Policy Web service
- D. Certificate Enrollment Policy Web service and Certification Authority Web Enrollment

Correct Answer: C

QUESTION 11

Your network contains 50 servers that run Windows Server 2003 and 50 servers that run Windows Server 2008.

You plan to implement Windows Server 2012 R2.

You need to create a report that includes the following information:

The servers that run applications and services that can be moved to Windows Server 2012 R2
The servers that have hardware that can run Windows Server 2012 R2
The servers that are suitable to be converted to virtual machines hosted on

Hyper-V hosts that run Windows Server 2012 R2

Solution: You install Windows Server 2012 R2 on a new server, and then you run the Windows Server Migration Tools.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 12

You need to recommend which type of clustered file server and which type of file share must be used in the Hyper-V cluster that hosts App2. The solution must meet the technical requirements and the security requirements.

Solution: You recommend a scale-out file server that uses an SMB share.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A
