Exam Code: 70-980

Exam Name: Recertification for MCSE: Server Infrastructure

Version: Demo

www.Pass4itSure.com

QUESTION 1

Your Active Directory currently contains five virtualized domain controllers that run Windows Server 2012 R2. The system state of each domain controller is backed up daily. The backups are shipped to a remote location weekly. Your company recently implemented a disaster recovery site that contains several servers. The servers run Windows Server 2012 R2 and have the HyperV server role installed. The disaster recovery site has a highspeed WAN link to the main office.

You need to create an Active Directory recovery plan that meets the following requirements:
Restores the Active Directory if a catastrophe prevents all access to the main office.
Minimizes data loss.

What should you include in the plan?

- A. HyperV replicas
- B. Live migration
- C. Virtual machine checkpoints
- D. System state restores

Correct Answer: A

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains several domain controllers. The domain controllers run either Windows Server 2012 or Windows Server 2008 R2. The domain functional level is Windows Server 2008 R2. The forest functional level is Windows Server 2008. The corporate compliance policy states that all items deleted from Active Directory must be recoverable from a Recycle Bin.

You need to recommend changes to the current environment to meet the compliance policy.

Which changes should you recommend? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Raise the forest functional level to Windows Server 2008 R2.
- B. Run the EnableADOptionalFeature cmdlet.
- C. Run the NewADObject cmdlet.
- D. Run the SetServer cmdlet
- E. Raise the domain functional level to Windows Server 2012.

Correct Answer: AB

QUESTION 3

Your network contains 500 client computers that run Windows 7 and a custom application named Appl. Appl uses data stored in a shared folder.

You have a failover cluster named Cluster1 that contains two servers named Server1 and Server2. Server1 and Server2 run Windows Server 2012 and are connected to an iSCSI Storage Area Network (SAN).

You plan to move the shared folder to Cluster1.

You need to recommend which cluster resource must be created to ensure that the shared folder can be accessed from Cluster1.

What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. The Generic Application cluster role
- B. The DFS Namespace Server cluster role
- C. The clustered File Server role of the File Server for general use type
- D. The clustered File Server role of the File Server for scaleout application data type

Correct Answer: C

QUESTION 4

Your network contains five servers that run Windows Server 2012 R2.

You install the HyperV server role on the servers. You create an external virtual network switch on each server. You plan to deploy five virtual machines to each HyperV server. Each virtual machine will have a virtual network adapter that is connected to the external virtual network switch and that has a VLAN identifier of 1. Each virtual machine will run Windows Server 2012 R2. All of the virtual machines will run the identical web application.

You plan to install the Network Load Balancing (NLB) feature on each virtual machine and join each virtual machine to an NLB cluster. The cluster will be configured to use unicast only.

You need to ensure that the NLB feature can distribute connections across all of the virtual machines.

Solution: From the properties of each virtual machine, you enable MAC address spoofing for the existing virtual network adapter.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 5

Your network contains five servers that run Windows Server 2012 R2.

You install the HyperV server role on the servers. You create an external virtual network switch on each server. You plan to deploy five virtual machines to each HyperV server. Each virtual machine will have a virtual network adapter that is connected to the external virtual network switch and that has a VLAN identifier of 1. Each virtual machine will run Windows Server 2012 R2. All of the virtual machines will run the identical web application.

You plan to install the Network Load Balancing (NLB) feature on each virtual machine and join each virtual machine to an NLB cluster. The cluster will be configured to use unicast only.

You need to ensure that the NLB feature can distribute connections across all of the virtual machines.

Solution: On each HyperV server, you create a new external virtual network switch. From the properties of each virtual machine, you add a second virtual network adapter and connect the new virtual network adapters to the new external virtual network switches.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 6

Your network contains five servers that run Windows Server 2012 R2.

You install the HyperV server role on the servers. You create an external virtual network switch on each server. You plan to deploy five virtual machines to each HyperV server. Each virtual machine will have a virtual network adapter that is connected to the external virtual network switch and that has a VLAN identifier of 1. Each virtual machine will run Windows Server 2012 R2. All of the virtual machines will run the identical web application.

You plan to install the Network Load Balancing (NLB) feature on each virtual machine and join each virtual machine to an NLB cluster. The cluster will be configured to use unicast only.

You need to ensure that the NLB feature can distribute connections across all of the virtual machines.

Solution: On each HyperV server, you create a new private virtual network switch. From the properties of each virtual machine, you add a second virtual network adapter and connect the new virtual network adapters to the new private virtual network switches.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 7

Your network contains five servers that run Windows Server 2012 R2.

You install the HyperV server role on the servers. You create an external virtual network switch on each

server. You plan to deploy five virtual machines to each HyperV server. Each virtual machine will have a virtual network adapter that is connected to the external virtual network switch and that has a VLAN identifier of 1. Each virtual machine will run Windows Server 2012 R2. All of the virtual machines will run the identical web application.

You plan to install the Network Load Balancing (NLB) feature on each virtual machine and join each virtual machine to an NLB cluster. The cluster will be configured to use unicast only.

You need to ensure that the NLB feature can distribute connections across all of the virtual machines.

Solution: From the properties of each virtual machine, you add a second virtual network adapter. You connect the new virtual network adapters to the external virtual network switch and configure the new virtual network adapters to use a VLAN identifier of 2.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 8

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 infrastructure.

You deploy a service named Service1 by using a service template. Service1 contains two virtual machines. The virtual machines are configured as shown in the following table.

Virtual machine name	Roles and software
VM1	Web server Windows Server 2012 R2 Operations Manager agent Configuration Manager agent
VM2	Windows Server 2012 R2 Operations Manager agent Microsoft SQL Server 2012 Configuration Manager agent

You need to recommend a monitoring solution to ensure that an administrator can review the availability information of Service1.

You need to recommend a monitoring solution to ensure that an administrator can review the availability information of Service1.

Solution: From Configuration Manager, you create a Collection and a Desired Configuration Management baseline.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 9

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 infrastructure.

You deploy a service named Service1 by using a service template. Service1 contains two virtual machines. The virtual machines are configured as shown in the following table.

Virtual machine name	Roles and software
VM1	Web server Windows Server 2012 R2 Operations Manager agent Configuration Manager agent
VM2	Windows Server 2012 R2 Operations Manager agent Microsoft SQL Server 2012 Configuration Manager agent

You need to recommend a monitoring solution to ensure that an administrator can review the availability information of Service1.

Solution: From Virtual Machine Manager (VMM), you modify the properties of the service template. Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 10

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 infrastructure.

You deploy a service named Service1 by using a service template. Service1 contains two virtual machines. The virtual machines are configured as shown in the following table.

Virtual machine name	Roles and software
VM1	Web server Windows Server 2012 R2 Operations Manager agent Configuration Manager agent
VM2	Windows Server 2012 R2 Operations Manager agent Microsoft SQL Server 2012 Configuration Manager agent

You need to recommend a monitoring solution to ensure that an administrator can review the availability information of Service1.

Solution: From Operations Manager, you create a Distributed Application and a Service Level Tracking object.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 11

Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 infrastructure. You deploy a service named Service1 by using a service template. Service1 contains two virtual machines. The virtual machines are configured as shown in the following table.

Virtual machine name	Roles and software
VM1	Web server Windows Server 2012 R2 Operations Manager agent Configuration Manager agent
VM2	Windows Server 2012 R2 Operations Manager agent Microsoft SQL Server 2012 Configuration Manager agent

You need to recommend a monitoring solution to ensure that an administrator can review the availability information of Service1.

Solution: From Operations Manager, you create a Distributed Application and a Monitor Override. Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 12

Your network contains an Active Directory domain named contoso.com. The network has an Active Directory Certificate Services (AD CS) infrastructure.

You need to issue a certificate to users to meet the following requirements:

Ensure that the users can encrypt files by using Encrypting File System (EFS). Ensure that all of the users reenroll for their certificate every six months. Solution: You create a copy of the User certificate template, and then you modify the extensions of the copy.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 13

Your network contains an Active Directory domain named contoso.com. The network has an Active Directory Certificate Services (AD CS) infrastructure.

You need to issue a certificate to users to meet the following requirements:

Ensure that the users can encrypt files by using Encrypting File System (EFS). Ensure that all of the users reenroll for their certificate every six months. Solution: From the properties of the Basic EFS template, you assign the Allow Enroll permission to the Authenticated Users group.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 14

Your network contains an Active Directory domain named contoso.com. The network has an Active Directory Certificate Services (AD CS) infrastructure.

You need to issue a certificate to users to meet the following requirements:

Ensure that the users can encrypt files by using Encrypting File System (EFS). Ensure that all of the users reenroll for their certificate every six months. Solution: You create a copy of the Basic EFS certificate template, and then you modify the validity period of the copy.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 15

Your network contains an Active Directory domain named contoso.com. The network has an Active Directory Certificate Services (AD CS) infrastructure.

You need to issue a certificate to users to meet the following requirements:

Ensure that the users can encrypt files by using Encrypting File System (EFS). Ensure that all of the users reenroll for their certificate every six months. Solution: From the properties of the User certificate template, you assign the Allow Enroll permission to the Authenticated Users group.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 16

Your network contains an Active Directory forest named contoso.com. The forest contains multiple servers that run Windows Server 2012. The network contains 1,000 client computers that run Windows 7. Two hundred remote users have laptop computers and only work from home. The network does not provide remote access to users.

You need to recommend a monitoring solution to meet the following requirements:

Generate a list of updates that are applied successfully to all computers.

Minimize the amount of bandwidth used to download updates.

An administrator must approve the installation of an update on any client computer.

What should you include in the recommendation? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Microsoft Asset Inventory Service (AIS)
- B. Windows InTune
- C. Windows Server Update Services (WSUS)
- D. Active Directory Federation Services (AD FS)
- E. Microsoft System Center 2012 Service Manager

Correct Answer: ABC

QUESTION 17

Your network contains a Microsoft System Center 2012 infrastructure.

You use Virtual Machine Manager (VMM) to manage 20 HyperV hosts.

You deploy a Windows Server Update Services (WSUS) server.

You need to automate the remediation of noncompliant HyperV hosts. The solution must minimize the amount of that virtual machines are unavailable.

What should you do first?

- A. Configure the HyperV hosts to download Windows updates from the WSUS server by using a Group Policy object (GPO).
- B. Install the WSUS Administration console on the VMM server, and then add the WSUS server to the fabric.
- C. Install the Virtual Machine Manager console on the WSUS server, and then add the WSUS server to the fabric.

- D. Configure the HyperV hosts to download Windows updates from the VMM server by using a Group Policy object (GPO).

Correct Answer: B

QUESTION 18

Your network contains an Active Directory domain named contoso.com. The domain contains a System Center 2012 R2 Virtual Machine Manager (VMM) deployment.

The domain contains 20 HyperV hosts that run Windows Server 2012 R2. Currently, the computer accounts of all of the HyperV hosts are in organizational unit (OU) named Virtualization. You plan to create two private clouds by using VMM named Cloud1 and Cloud2. The virtual machines for Cloud1 will be hosted on two HyperV hosts named Server1 and Server2. The virtual machines for Cloud2 will be hosted on two HyperV hosts named Server3 and Server4.

You need to recommend an administrative model for Cloud1 and Cloud2.

Which technology best achieves the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Two sites and two Application Administrator (SelfService User) user roles
- B. Two host groups and two Application Administrator (SelfService User) user roles
- C. Two OUs and two Application Administrator (SelfService User) user roles
- D. Two logical units and two Tenant Administrator user roles

Correct Answer: B

QUESTION 19

Your network contains an internal network and a perimeter network. The internal network contains an Active Directory domain named contoso.com. All client computers in the perimeter network are part of a workgroup. The internal network contains a Microsoft System Center 2012 infrastructure. You plan to implement an update infrastructure to update the following:

Windows Server 2012

System Center 2012

Windows Server 2003

Microsoft SQL Server 2012

Thirdparty virtualization hosts

Microsoft SharePoint Server 2010

Another administrator recommends implementing a single WSUS server to manage all of the updates. You need to identify which updates can be applied by using the recommended deployment of WSUS. What should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. SQL Server 2012
- B. System Center 2012
- C. SharePoint Server 2010
- D. Windows Server 2012
- E. Thirdparty virtualization hosts
- F. Windows Server 2003

Correct Answer: BCDE

QUESTION 20

Your company has three offices. The offices are located in Seattle, London, and Tokyo. The network contains an Active Directory domain named northwindtraders.com. Each office is configured as an Active Directory site.

System Center 2012 R2 Operations Manager is deployed to the domain. The servers in all three sites are monitored by using Operations Manager.

The company has a web site for its customers. The web site requires users to sign in.

You need to recommend a solution to monitor the web site.

The solution must meet the following requirements:

Monitor the availability of the web site from locations in North America, Europe, Asia, and Australia.

Monitor multistep requests to the web site.

Use a central console for monitoring.

What should you include in the recommendation?

- A. Import the System Center Global Services Monitoring Management Pack and add the Web Application Availability Monitoring monitoring type.
- B. Add the Web Application Transaction monitoring type and configure watcher nodes.
- C. Add the TCP Port monitoring type and configure watcher nodes.
- D. Import the System Center Global Services Monitor Management Pack and add the Visual Studio Web Test Monitoring monitoring type.

Correct Answer: D
