**QUESTION 1**

This question requires that you evaluate the underlined text to determine if it is correct.

The duplication of code so that modifications can happen in parallel is known as separating.

Select the correct answer if the underlined text does not make the statement correct. Select "No change is needed" if the underlined text makes the statement correct.

- A. No change is needed
- B. branching
- C. merging
- D. splitting

Correct Answer: B

---

**QUESTION 2**

Which term is used to describe small units of text that are stored on a client computer and retrieved to maintain state?

- A. trace
- B. cross-page post
- C. cookie
- D. server transfer

Correct Answer: C

HTTP is a stateless protocol. This means that user data is not persisted from one Web page to the next in a Web site. One way to maintain state is through the use of cookies. Cookies store a set of user specific information, such as a reference identifier for a database record that holds customer information.

---

**QUESTION 3**

You are creating an application that accepts input and displays a response to the user. You cannot create a graphical interface for this application. Which type of application should you create?

- A. Windows Forms
- B. Windows Service
- C. Web-based
- D. Console-based

Correct Answer: C

**QUESTION 4**

Which three are valid SQL keywords? (Choose three.)

- A. GET
- B. FROM
- C. SELECT
- D. WHAT
- E. WHERE

Correct Answer: ACE

---

**QUESTION 5**

This question requires that you evaluate the underlined text to determine if it is correct.

A data dictionary that describes the structure of a database is called metadata.

Select the correct answer if the underlined text does not make the statement correct. Select "No change is needed" if the underlined text makes the statement correct.

- A. No change is needed
- B. normalization
- C. a database management system (DBMS)
- D. metacontent

Correct Answer: A

---

**QUESTION 6**

You create an object of type ANumber. The class is defined as follows.

```
public Class ANumber
{
    private int _number = 7;

    public ANumber()
    {
    }

    public ANumber(int number)
    {
        _number = number;
    }
}
```

The code is executed as follows.

```
ANumber mynumber = new ANumber(3);
```

What is the value of `_number` after the code is executed?

- A. Null
- B. 0
- C. 3
- D. 7

Correct Answer: C

---

#### QUESTION 7

You have a class named `Truck` that inherits from a base class named `Vehicle`. The `Vehicle` class includes a protected method named `brake ()`. How should you call the `Truck` class implementation of the `brake ()` method?

- A. `Vehicle.brake ();`
- B. `This.brake ();`
- C. `MyBase.brake();`
- D. `Truck.brake ();`

Correct Answer: C

The `MyBase` keyword behaves like an object variable referring to the base class of the current instance of a class. `MyBase` is commonly used to access base class members that are overridden or shadowed in a derived class.

---

#### QUESTION 8

What is displayed when you attempt to access a Web service by using a Web browser?

- A. a visual depiction of your preliminary connection to the Web service
- B. a listing of methods that are available in the Web service
- C. an error page explaining that you have accessed the Web service incorrectly
- D. a directory listing of the Web services application structure

Correct Answer: A

**QUESTION 9**

For each of the following statements, select Yes if the statement is true. Otherwise, select No. Each correct selection is worth one point.

Hot Area:

**Answer Area**

Description of Behavior	Yes	No
An entity relationship diagram (ERD) is designed for an object-oriented database.	<input type="radio"/>	<input type="radio"/>
An entity relationship diagram (ERD) contains entities, relationships, and attributes.	<input type="radio"/>	<input type="radio"/>
Cardinality refers to how one table is linked to another table; as one-to-many.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

**Answer Area**

Description of Behavior	Yes	No
An entity relationship diagram (ERD) is designed for an object-oriented database.	<input type="radio"/>	<input checked="" type="radio"/>
An entity relationship diagram (ERD) contains entities, relationships, and attributes.	<input checked="" type="radio"/>	<input type="radio"/>
Cardinality refers to how one table is linked to another table; as one-to-many.	<input checked="" type="radio"/>	<input type="radio"/>

**QUESTION 10**

For each of the following statements, select Yes if the statement is true. Otherwise, select No. Each correct selection is worth one point.

Hot Area:

**Answer Area**

Test Behavior	Yes	No
The primary goal of unit testing is to take the smallest piece of testable software in the application, isolate it from the remainder of the code, and determine whether it behaves exactly as expected.	<input type="checkbox"/>	<input type="checkbox"/>
In unit testing, each unit is tested separately before integrating the units into modules to test the interfaces between modules.	<input type="checkbox"/>	<input type="checkbox"/>
The driver that you use in unit testing simulates a calling unit and the stub simulates a called unit.	<input type="checkbox"/>	<input type="checkbox"/>

Correct Answer:

**Answer Area**

Test Behavior	Yes	No
The primary goal of unit testing is to take the smallest piece of testable software in the application, isolate it from the remainder of the code, and determine whether it behaves exactly as expected.	<input checked="" type="checkbox"/>	<input type="checkbox"/>
In unit testing, each unit is tested separately before integrating the units into modules to test the interfaces between modules.	<input checked="" type="checkbox"/>	<input type="checkbox"/>

### QUESTION 11

You are creating a variable for an application.

You need to store data that has the following characteristics in this variable:

Consists of numbers and characters

Includes numbers that have decimal points Which data type should you use?

A.

String

B.

Float

C.

Char

D.

Decimal

Correct Answer: A

Need a string to store characters.

---

### QUESTION 12

Which of the following must exist to inherit attributes from a particular class?

A. Public properties

B. A has-a relationship

C. Static members

D. An is-a relationship

Correct Answer: D

Visual Basic has been a pioneer of binary code reuse -- controls being the classic example. You reuse the code in a control by placing an instance of the control on your form. This is known as a containment relationship or a has-a relationship; that is, the form contains or has a CommandButton.
