-  **800,000+** Satisfied Customers

**QUESTION 1**

The application of the \_\_\_\_\_ pattern results in a dynamic vertical scaling system that uses the \_\_\_\_\_ program to move LUNs to cloud storage devices of higher capacity.

- A. Cross-Storage Device Vertical Tiering, LUN migration
- B. Intra-Storage Device Vertical Tiering, storage replication
- C. Shared Resources, rapid provisioning
- D. Noneoftheabove.

Correct Answer: A

---

**QUESTION 2**

The \_\_\_\_\_ is used to keep track of workload distribution between cloud storage devices, and is established with the storage capacity system by the application of the \_\_\_\_\_ pattern.

- A. Storage capacity monitor, Storage Workload Management
- B. LUN migration program, Redundant Storage
- C. Load balancer, Elastic Disk Provisioning
- D. Storage replication program, Storage Maintenance Window

Correct Answer: A

---

**QUESTION 3**

The application of the \_\_\_\_\_ pattern establishes a system that uses \_\_\_\_\_ to avoid the risk of establishing a single point of failure in a cloud architecture.

- A. Zero Downtime, multiple physical server hosts
- B. Synchronized Operating State, clustering
- C. Elastic Disk Provisioning, multiple cloud storage devices
- D. Load Balanced Virtual Server Instances, virtualization

Correct Answer: A

---

**QUESTION 4**

The cloud architecture that results from the application of the \_\_\_\_\_ pattern relies on the \_\_\_\_\_ mechanism to synchronize cloud storage devices.

- A. Synchronized Operating State, resource cluster
- B. Redundant Storage, resource replication
- C. Zero Downtime, hypervisor
- D. Service Load Balancing, failover system

Correct Answer: B

---

**QUESTION 5**

After applying the \_\_\_\_\_ pattern, a system is established in which a \_\_\_\_\_ is used to provide virtual servers with direct access to LUNs.

- A. Direct LUN Access, hypervisor
- B. Redundant Storage, cloud storage device
- C. Direct LUN Access, physical host bus adapter card
- D. Redundant Storage, virtual switch

Correct Answer: C

---

**QUESTION 6**

The application of the Redundant Storage pattern results in a system comprised of \_\_\_\_\_ and \_\_\_\_\_ cloud storage devices.

- A. block-based, file-based
- B. primary, secondary
- C. physicalvirtual
- D. vertically scaled, horizontally scaled

Correct Answer: B

---

**QUESTION 7**

Applying the Redundant Storage pattern establishes a system made of \_\_\_\_\_ and \_\_\_\_\_ cloud storage devices. The \_\_\_\_\_ cloud storage device keeps a copy of the data for failover purposes.

- A. primary, secondary, primary
- B. load balanced, clustered, load balanced
- C. primary, secondary, secondary
- D. load balanced, clustered, clustered

Correct Answer: C

---

**QUESTION 8**

Applying the \_\_\_\_\_ pattern establishes an elastic provisioning system that is capable of dynamically allocating and reclaiming \_\_\_\_\_ for virtual servers.

- A. Elastic Network Capacity, physical network ports
- B. Elastic Resource Capacity, CPUs and RAM memory
- C. Elastic Disk Provisioning, bandwidth
- D. Noneoftheabove.

Correct Answer: B

---

**QUESTION 9**

The system that results from the application of the Elastic Disk Provisioning pattern uses the thin-provisioning program to create virtual server disks.

- A. True
- B. False

Correct Answer: A

---

**QUESTION 10**

In a cloud architecture resulting from the application of the Cloud Bursting compound pattern, the \_\_\_\_\_ mechanism is used to maintain synchronizing between a cloud consumer's on-premise and cloud-based IT resources.

- A. hypervisor
- B. resource pooling
- C. automated scaling listener
- D. resource replication

Correct Answer: D
