**QUESTION 1**

Which of the following statements is NOT a characteristic of Spring Security? (select one)

- A. It provides a strict implementation of the Java EE Security specification
- B. Authentication data can be accessed using a variety of different mechanisms, including databases and properties files
- C. Security can be configured at the method level
- D. Tag libraries are provided for displaying security context information in JSP pages

Correct Answer: A

QUESTION 2

If the propagation behavior is Propagation.REQUIRES_NEW, choose the statement which describes the propagation behavior (select one)

- A. Runs in a nested transaction if an active transaction exists. If an active transaction does not exist, the transaction behaves as if Propagation.REQUIRED is set
- B. Supports a transaction if one already exists. Throws an exception if an active transaction does not exist.
- C. Always starts a new transaction. If an active transaction already exists, it is suspended
- D. Always executes without a transaction even if an active transaction exists. Throws an exception if an active transaction exists.

Correct Answer: C

QUESTION 3

@Configuration

```
public class AppConfig {
```

```
@Bean
```

```
public ClientService clientService() {
```

```
    ClientServiceImpl clientService = new ClientServiceImpl();
```

```
    clientService.addClientDao(new ClientDao());
```

```
    return clientService;
```

```
}
```

In the example above, which statement is NOT true with regards to Spring Java configuration? (select one)

- A. The declared bean is a singleton by default
- B. This bean might be wrapped by a proxy
- C. This bean cannot use a method starting with "add" to inject a dependency
- D. The bean is of type ClientService

Correct Answer: C

QUESTION 4

Which of the following methods is NOT provided by the JmsTemplate? (select one)

- A. setDefaultDestination
- B. onMessage (asynchronous call)
- C. convertAndSend
- D. receiveAndConvert (synchronous call)

Correct Answer: B

QUESTION 5

Consider the following Spring JMS configuration

Which of the following statements is true. (select one)

- A. Spring will automatically receive messages from the order.queue.destination
- B. The orderListener bean has to implement javax.jms.MessageListener or Spring's SessionAwareMessageListener interface
- C. The application needs to run in an application server that provides a JMS implementation out of the box
- D. Spring will automatically send a response message

Correct Answer: A

QUESTION 6

Which of the following statements about the @Autowired annotation is NOT true? (select one)

- A. The default behavior is that if a dependency cannot be satisfied with @Autowired, the ApplicationContext will throw a RuntimeException
- B. @Autowired is a Spring-specific annotation
- C. Multiple arguments can be injected into a single method using @Autowired
- D. It cannot be used to annotate fields, only constructors and methods

Correct Answer: D

QUESTION 7

What is the principal purpose of Spring's Security tag library? (Select one)

- A. To provide a mechanism for applying security to Spring Web Services
- B. To allow certain URLs to be tagged as requiring secure access
- C. To provide functionality in JSP pages, such as hiding certain sections based on roles
- D. To allow Spring Security to be applied to XHTML

Correct Answer: C

QUESTION 8

Which of the following statements is true concerning Spring's HttpInvoker remoting protocol? (select one)

- A. HttpInvoker requires a web server to be running on the server
- B. HttpInvoker is a synchronous remoting mechanism
- C. The client invokes remote methods on the server using an HTTP POST
- D. All of the above

Correct Answer: D

QUESTION 9

```
@Transactional(timeout=60)
```

```
public class ClientServiceImpl implements ClientService {
```

```
@Transactional(timeout=30)
```

```
public void update1() {}
```

```
}
```

What timeout setting is applied to the timeout inside the update1 method? (Select one)

- A. 60
- B. 30
- C. This will not compile. Attributes such as timeout, propagation and isolation cannot be declared at the class level
- D. This will not compile. Attributes such as timeout, propagation and isolation cannot be declared at the method level

Correct Answer: B

QUESTION 10

Which of the following statements about the Spring DispatcherServlet is NOT true? (select one)

- A. It is an abstract Servlet class which must be subclassed to provide mapping and business logic
- B. It delegates to Web infrastructure beans such as ViewResolvers and Controllers
- C. It is a "front controller" which coordinates all HTTP request handling activities for Spring MVC
- D. It is defined in web.xml just like any other servlet

Correct Answer: A

QUESTION 11

Two beans of type MyBean are defined in the ApplicationContext with singleton scope, with ids "myBean1" and "myBean2". The getBean() method is called once for each bean. Which statement is true about the two references returned? (Select one)

- A. The two references refer to different instances of the same type
- B. Both references refer to the same bean instance
- C. One of the references will be null
- D. A RuntimeException will be thrown when the ApplicationContext is initialized

Correct Answer: A

QUESTION 12

Which of the following statements about Spring and unit testing is true? (Select one)

- A. Spring provides an internal mock framework so there is no need for a third-party mock framework such as Mockito or EasyMock
- B. Spring provides an abstraction to existing Mock frameworks

C. Both a and b

D. Neither a or b

Correct Answer: D

QUESTION 13

Identify the correct statement(s) about the following pointcut expression: `execution(* rewards..restaurant.*.*(..))` (select one or several answers)

A. There may be several directories between `\\'rewards\\'` and `\\'restaurant\\'`

B. There is no restriction on the class name

C. The target method may have several arguments

D. The return type must not be "void"

Correct Answer: AB

QUESTION 14

Consider that all Spring beans have been declared within a package called "com.springsource.service". To enable component scanning one must do the following:

A. Nothing (component scanning is enabled by default)

B. Add to your XML configuration

C. Add to your XML configuration

D. Remove all other bean definitions from the XML configuration

Correct Answer: C

QUESTION 15

State which type of object the `JdbcTemplate` can be used to query (select one)

A. Simple types (int, long, String, etc)

B. Generic Maps

C. Domain Objects

D. All of the above

Correct Answer: D
