QUESTION 1

Select the correct statements related to IP Multicast?

- A. IP multicast uses unreliable data transfer protocol as UDP
- B. The network must be IP multicast enabled
- C. IP Multicast routers must maintain state information of active multicast groups
- D. All of the above

Correct Answer: D

QUESTION 2

Which of the following CLI commands could you use to determine which ports are enabled for ESRP host attach?

- A. show ports info detail
- B. show esrp detail
- C. show esrp
- D. show ports config

Correct Answer: B

QUESTION 3

How many bits in the IP TOS field does a Summit 48i examine?

- A. 4
- B. 6
- C. 8
- D. 16

Correct Answer: B

QUESTION 4

Which of the following IP destination addresses can be used for multicast streams?

- A. 10.1.0.0
- B. 226.0.0.1

C. 192.168.10.0

D. 172.18.255.255

Correct Answer: B

QUESTION 5

IP Multicast uses TCP socket number 1812 for packet exchange

A. True

B. False

Correct Answer: B

QUESTION 6

When you create an ACL entry on Summit 48i switch it works in the following way

A. inbound

B. outbound

C. bi-directional

D. The ACL entry needs to be enabled first to work.

Correct Answer: A

QUESTION 7

In general IS-IS allows routing of both IP and OSI packets. What type of Implementation does ExtremeWare support?

A. IP only

B. OSI only

C. Dual

D. None of the above

Correct Answer: A

QUESTION 8

Radius and Tacacs+ are both access security features supported by Extreme Networks. Servers running these two features are also known as AAA servers.

Where do these 3 A's stand for?

- A. authentication, authorization, accounting
- B. authentication, access, accounting
- C. attribute, authorization, accounting
- D. authentication, arrival, accounting

Correct Answer: A

QUESTION 9

Is it possible on a single switch, to put different physical ports, belonging to the same VLAN, into different STP modes?

- A. No, this is not possible.
- B. Yes, this is possible.
- C. This is only possible when these ports are in EMISTP mode.
- D. This is only possible when these ports are in 802.1D mode.

Correct Answer: B

QUESTION 10

What mechanisms does a master node use to detect a failure in the EAPS ring architecture? Select the two that apply.

- A. The master node receives a trap-message from a transit node when it detects loss of link connectivity on any of its ring ports.
- B. The master node uses OSPF to quickly learn about link state topology changes.
- C. The master node sends a health-check packet on the control VLAN, when the ring breaks the master node stops receiving this packet on its secondary port.
- D. The master node uses IGMP and IGMP snooping to detect the transit nodes and then to learn about failures in the topology between them.

Correct Answer: AC

QUESTION 11

EAPS is an Extreme Networks proprietary solution and is only supported on Ethernet fiber links with a speed of 100 Mbps.

- A. TRUE
- B. FALSE

Correct Answer: B

QUESTION 12

SSH2 on Extreme Networks ? chipset switches enables encrypted telnet sessions towards the witch. SSH2 Client and Server both have a private key and exchange a public key before the connection is setup.

- A. TRUE
- B. FALSE

Correct Answer: A

QUESTION 13

On an Extreme Networks switch, how many bits comprise an OSPF area ID?

- A. 32 BITS
- B. 48 BITS
- C. 64 BITS
- D. 128 BITS

Correct Answer: A

QUESTION 14

What is the standard IEEE specification for signaling QoS values in a tagged Ethernet frame?

Correct Answer: Pending

QUESTION 15

A stream of IP Multicast packets is addressed to

- A. A specific host
- B. All hosts within a specific broadcast domain.
- C. A multicast group
- D. None of the above

Correct Answer: C
