

Exam : **HP2-Z21**

Title : Planning and Designing HP
Enterprise Networking

Version : Demo

www.Pass4itSure.com

1. What are two features that routing switches operating in a campus core must support in order to handle the vast amounts of data, voice, and video traffic in the contemporary enterprise LAN? (Select two.)
- A. They must support hierarchical QoS technologies and virtual routing and forwarding (VRF) protocols.
 - B. They must support non-blocking forwarding for large amounts of switched and routed traffic.
 - C. They must scale with ease.
 - D. They must take a primary role in controlling security threats, in particular threats on virtualized servers that might never cross the wire.
 - E. They must take a primary role in determining endpoint compliance with company policies.

Answer: A,B

2. What is an advantage of installing Converged Network Adaptor (CNA) NICs on virtualized servers? .?
- A. One CNA NIC typically costs less than one traditional Ethernet NIC but provides adequate performance for servers that have been optimized with virtualization.
 - B. CNA NICs enable servers to act as Fiber Channel over Ethernet (FCoE) gateways between SAN and LAN switches.
 - C. CNA NICs provide the high-speed connection required for servers to receive Fiber Channel over Ethernet (FCoE) traffic.
 - D. Unlike traditional Ethernet NICs, CNA NICs support IPv6, a necessary protocol for data centers of the future.

Answer: C

3. Which features are necessary in the enterprise aggregation layer? (Select three.)
- A. It must support high-speed traffic delivery.
 - B. It must be highly available.
 - C. It must be flexible.
 - D. It must take a primary role in controlling user access to the network. E.
- It must take a primary role in controlling access to network resources.

Answer: A,B,C

4. As a data center becomes virtualized and begins to implement cloud computing, how does the traffic flow typically change?
- A. Both north-south (client-server) and east-west (server-to-server) traffic often increase.
 - B. The speed and reliability of storage traffic transmission increases.
 - C. The traffic flow shifts from primarily server-to-server to primarily server-to-client.
 - D. Traffic decreases as more data is processed locally on users' workstations.

Answer: A

5. Which is an effect of virtualization on the data center networking infrastructure?
- A. Virtualized servers use less RAM.
 - B. Virtualized servers use less processing power.
 - C. Virtualized servers require more bandwidth.
 - D. Because services and applications running on the virtualized server can interfere with each other, they must be closely monitored.

Answer: C

Trying our product !

- ★ **100%** Guaranteed Success
- ★ **100%** Money Back Guarantee
- ★ **365 Days** Free Update
- ★ **Instant Download** After Purchase
- ★ **24x7** Customer Support
- ★ Average **99.9%** Success Rate
- ★ More than **69,000** Satisfied Customers Worldwide
- ★ Multi-Platform capabilities - **Windows, Mac, Android, iPhone, iPod, iPad, Kindle**

Need Help

Please provide as much detail as possible so we can best assist you.

One Year Free Update

Free update is available within One Year after your purchase. After One Year, you will get 50% discounts for updating. And we are proud to boast a 24/7 efficient Customer Support system via Email.

Money Back Guarantee

To ensure that you are spending on quality products, we provide 100% money back guarantee for 30 days from the date of purchase.

Security & Privacy

We respect customer privacy. We use McAfee's security service to provide you with utmost security for your personal information & peace of mind.
