**QUESTION 1**

You need to determine the output of the following code;

```
int i;  
int j = 0;  
for(i =0; i < 4)  
{  
break;  
}  
}  
info (strFmt("%1" , j));
```

What is the output in the Infolog after running the code?

- A. 3
- B. 4
- C. 5
- D. 10

Correct Answer: C

---

**QUESTION 2**

You need to create several reports that use the same combination of tables as data sources. You know that you will need a relation between these tables so that the report outputs as desired. You also want the ability to change details, such as report parameters or sorting options, at run time.

Which element should you create to store these tables and the relations so that you can reuse the element as the data source on future reports?

- A. a new table
- B. a query
- C. a view
- D. a table map

Correct Answer: C

---

**QUESTION 3**

You need to present best practices for creating and managing labels to the development team.

What are three accepted best practices for labels? Each correct answer presents a complete solution

- A. Ensure that labels have correct translation.
- B. Create new labels for each new version of an element
- C. Create static labels and generate label files after the project is complete.
- D. Use labels when programming for all external strings.
- E. Use labels for every element or artifact.

Correct Answer: ABC

---

**QUESTION 4**

You are working with a new programmer and need to explain which types of objects can be aa

- A. References Rationale
- B. Models Rationale
- C. Project Rationale
- D. Application Object Tree (AOT)
- E. Elements Rationale

Correct Answer: ADE

---

**QUESTION 5**

You need to create a form with details from the master form style. This form needs to open in view mode with an Edit button so that it is editable. Which property should you set at the form design level to achieve this behavior?

- A. set Form.Design.Mode property to Edit\\' value
- B. set Form.Design.ViewEditMode property to `View\\' value
- C. set Form.Design.ViewEditMode property to `Edit\\' value
- D. set Form.Design.ViewEditMode property to `Auto\\'Value

Correct Answer: C

---

**QUESTION 6**

You are developing a form that allows users to update an order status. You create a table named Table1 that you will use as a data source for this form.

You want to include a radio-button style selection so that the end user can choose between three different order statuses: "Canceled", "Delivered", "Processing".

What should you add to Table1 so that you can add the radio button selection to the form?

- A. three different string fields that represent each order status
- B. three different Extended Data Types (EDTs) of type string with each order status
- C. a Boolean data type with values that represent each choice
- D. a base enumeration with three elements that represent each order status

Correct Answer: A

---

**QUESTION 7**

A relationship is defined between two tables named CustTable and CustGroup. Each record in CustTable references a record in CustGroup.

You need to set up delete actions to ensure that records in CustGroup can only be deleted if there are no CustTable records that reference or relate to the record.

Which values for the On Delete property for the relation should you specify?

- A. None
- B. Cascade + Restricted
- C. Restricted
- D. Cascade

Correct Answer: D

---

**QUESTION 8**

You need to determine the output of the following code:

```
int i = 25;
str output = "A";
if (i > 10) {
    if (i < 20) {
        if (i > 50) {
            Output = "D";
        }
        Else output = "E";
    }
}
info (output);
```

What is the output in the InfoLog after running the code?

- A. A E
- B. B B

C. C E

D. B D

Correct Answer: B

---

### QUESTION 9

Your company needs a new table that will track customer names and numbers for three new types of transactions, along with the date for each transaction.

You need to create the new table and fields.

Which field should you create using a base enumeration?

A. customer name

B. transaction type

C. customer account number

D. transaction date

Correct Answer: A

---

### QUESTION 10

You are using the Visual Studio development environment to perform a customization for your client.

You are working in a property pane and need to set the property value of a specific element.

What are two possible ways to organize element properties in a property pane? Each correct answer presents a complete solution.

A. by priority

B. by category

C. mandatorily

D. alphabetically

Correct Answer: CD

---

### QUESTION 11

You are using the Visual Studio development environment to perform a customization for your client You create a

custom model named MyCustomModel with extended reference models.

You need to change the dependency information for the current model.

Which action should you perform in the Microsoft Dynamics AX menu?

- A. Point to the project and then click Add Reference.
- B. Point to Model Management and then click Update Model Parameters.
- C. Point to Model Management and then click Viewing Package Dependencies.
- D. Point to Model Management and then click Build Model.

Correct Answer: A

---

#### QUESTION 12

You are using the Visual Studio development environment to perform a customization for your client.

You need to follow best practices to create a new table to store customer ranking information for each customer.

What should you name this new table element?

- A. CustRantangInfo
- B. Custrantanginfo
- C. custRantangInfo
- D. custrantanginfo

Correct Answer: A
