**QUESTION 1**

Which of the following is an expected result of successfully adopting SOA?

- A. A natural increase in runtime performance that you will gain as a result of the fact that service compositions will often be comprised of a greater amount of individually participating programs (services) than traditional distributed applications.
- B. The fact that the existing IT organizational structure will not have to change because of how well a service-oriented enterprise fits into traditional IT departmental structures that are focused on project-centric application delivery.
- C. The tactical (short-term) focus of service-orientation, which allows for the initial rapid delivery of services without concerns about their subsequent governance.
- D. The strategic (long-term) target state that is attainable when many of the services delivered are interoperable and reusable, thereby allowing for them to be repeatedly composed in response to new and changing business requirements.

Correct Answer: D

---

**QUESTION 2**

Service Composition A is comprised of 4 services. Service Composition B is comprised of 6 services. Because both service compositions are comprised of services from the same service inventory, the service inventory will have a total of how many services?

- A. 10
- B. 24
- C. Based on the information provided, it's impossible to know how many services reside in the service inventory because we don't know how many other service compositions exist.
- D. Based on the information provided, it's impossible to know how many services reside in the service inventory because the quantity of services within a service inventory is not determined by the quantity of services in service compositions.

Correct Answer: D

---

**QUESTION 3**

When migrating to a service-oriented computing platform you are working toward achieving a specific target environment. Which of the following statements about this target environment are true? SELECT ALL THAT APPLY

- A. In this target environment, services establish a federated endpoint layer.
- B. In this target environment, services are naturally interoperable and composable.
- C. In this target environment, business logic is accurately expressed through services as a result of collaboration between business analysts and technology experts.

D. This target environment helps the organization itself gain greater value from IT, because IT imposes less of a burden on the organization."

Correct Answer: ABCD

---

#### QUESTION 4

In order to achieve we have traditionally required projects. With service-orientation, we aim to establish an intrinsic level of within each service so as to reduce the need for effort.

- A. vendor diversity, integration, vendor diversity, design
- B. agility, development, scalability, development
- C. interoperability, integration, interoperability, integration
- D. autonomy, integration, statelessness, integration

Correct Answer: C

---

#### QUESTION 5

Service-oriented computing aims to reduce the burden of IT upon the organization as a whole by reducing waste, operational cost, and overhead associated with the governance and evolution of the IT enterprise. Select the correct answer

- A. True
- B. False

Correct Answer: A

---

#### QUESTION 6

Agnostic solution logic is logic that is considered single-purpose because it is unique to one task. Select the correct answer.

- A. True
- B. False

Correct Answer: B

---

#### QUESTION 7

One of the fundamental characteristics of service-oriented architecture is:

- A. business-driven
- B. integration-centric
- C. inventory-neutral
- D. silo-driven

Correct Answer: A

---

### QUESTION 8

"A primary focus of service modeling is the encapsulation and abstraction of business logic in support of defining business service candidates." What is wrong with this statement?

- A. Service modeling is a phase dedicated to defining non-business service logic only.
- B. There is no such thing as a business service when creating service-oriented solutions.
- C. The service modeling process results in the implementation of services, not the definition of service candidates.
- D. There is nothing wrong with this statement.

Correct Answer: D

---

### QUESTION 9

The distinct ownership and governance requirements introduced by agnostic services can introduce the need for more staff and less staff.

- A. management-centric, administration-centric
- B. development-centric, quality assurance-centric
- C. enterprise-centric, project-centric
- D. development-centric, communication-centric

Correct Answer: C

---

### QUESTION 10

An IT enterprise proceeds with an SOA initiative that is based on the creation of a single enterprise service inventory.

However, conflicts arise when different IT departments disagree on who will own the services and how they will be governed. Which of the following alternative approaches could be chosen to address these conflicts?

- A. The top-down approach is chosen. This allows services to be modeled subsequent to their design, thereby enabling each service to be governed by multiple owners.
- B. It is decided to proceed with the creation of multiple domain service inventories. This allows collections of services to be independently governed by different owners, while still enabling the IT enterprise as a whole to transition toward SOA.
- C. The established "contract last" approach is chosen, allowing different IT managers to focus on contract-related governance issues after the services are deployed and in use.
- D. Because SOA projects absolutely require enterprise-wide standardization and further demand the creation of an enterprise service inventory, the IT managers have no choice than to cancel the project.

Correct Answer: B

---

#### QUESTION 11

The ability of one service to another service forms the basis of service .

- A. divert, diversification
- B. register, registries
- C. consume, composition
- D. integrate, integration

Correct Answer: C

---

#### QUESTION 12

A software program that invokes and interacts with a service is referred to as a:

- A. service contract
- B. service inventory
- C. service container
- D. none of the above

Correct Answer: D

---

#### QUESTION 13

The Universal SOA Commission (USOAC) has been standardizing the service-oriented architectural model since 1998.

Their role is to regulate the marketplace to ensure that all usages of the "SOA" acronym for branding purposes are legitimate. They enforce this via product assessment and certification, a process that all of the major software vendors follow to obtain official USOAC certification.

A. True

B. False

Correct Answer: B

---

#### QUESTION 14

The goals of service-oriented computing are focused on tactical (short-term) benefits, as opposed to strategic (long-term) benefits. Select the correct answer.

A. True

B. False

Correct Answer: B

---

#### QUESTION 15

Which of the following statements is true?

A. "Contract first" design is important to SOA because it makes you think about service contract design options at the same time that you are building the underlying service logic.

B. "Contract first" design is important to SOA because it forces you to establish standardized service contracts prior to the development of the underlying service logic.

C. "Contract first" design is important to SOA because without a contract, services cannot be invoked. However, there is no preference as to when, during the service delivery lifecycle, the contract should be designed or established.

D. "Contract first" design is an unproven design technique that is not commonly employed when delivering service-oriented solutions and is therefore not considered important to SOA.

Correct Answer: B
