-  **800,000+** Satisfied Customers

**QUESTION 1**

An administrator needs to deploy several virtual machines. Storage contention between the virtual machines should be managed by the VMkernel. Some of the virtual machines will use MSCS and should be highly available across the ESXi

5.5 hosts.

Which two storage options meet these requirements? (Choose two.)

- A. iSCSI
- B. NFS
- C. Fibre Channel
- D. vSAN

Correct Answer: AC

QUESTION 2

Which two statements are true regarding a new vSphere deployment that is using software FCoE boot from SAN? (Choose two.)

- A. Multi-pathing options must be configured by the vmkernel after boot.
- B. The adapter must support iBFT or UEFI.
- C. The adapter must support FBFT or FBPT.
- D. Multi-pathing options must be configured in the Boot ROM.

Correct Answer: AC

QUESTION 3

A DRS cluster has been created with the following specifications: All mission critical virtual machines are in the root resource pool.

All other virtual machines are placed into two child pools based on medium or low priority.

The two child pools contain adequate resources needed by the medium and low priority virtual machines.

The two child pools are reserving 35% of the total available resources of the cluster.

What is the advantage of leaving the mission critical virtual machines in the root resource pool?

- A. The root resource pool has immediate access to new physical resources added to the cluster.

- B. Virtual machines placed in the root resource pool have a higher vMotion priority in DRS.
- C. Transparent Memory Page Sharing in the root resource pool has a higher weight than in child pools.
- D. Virtual machines placed in the root resource pool have higher default share values.

Correct Answer: A

QUESTION 4

An administrator needs to unmount a datastore that is also used for HA storage heartbeats.

What is the least disruptive method for an administrator to perform this activity on a slave HA host?

- A. On the Datastore Heartbeating tab, unmount the datastore normally and confirm a new datastore has been selected.
- B. On the Datastore Heartbeating tab, specify an alternate datastore, then unmount the datastore normally.
- C. Disable HA datastore heartbeats, then unmount the datastore.
- D. Reduce the number of heartbeat datastores, then remove the datastore from the heartbeat list.

Correct Answer: B

QUESTION 5

A vSphere administrator needs the ability to adjust the amount of guaranteed physical CPU and Memory resources to a virtual machine without incurring application downtime. Which actions must the administrator perform?

- A. Enable CPU hotplug and Memory hotplug on the virtual machine.
- B. Adjust the number of CPUs and the Memory Configuration for the virtual machine.
- C. Adjust the CPU reservation slider and click the Reserve all Guest Memory checkbox.
- D. Adjust the CPU and Memory reservation sliders on the virtual machine.

Correct Answer: D

QUESTION 6

-- Exhibit -

View: vSphere Standard Switch

Networking

Refresh Add Networking... Properties...

Standard Switch: vSwitch0

Remove... Properties...

Standard Switch: vSwitch1

Remove... Properties...

-- Exhibit -The vSphere administrator needs to remove the Production virtual machine port group from an ESXi host. The ESXi host's Networking Configuration tab is shown in the exhibit.

After disconnecting the Fileserver02 VM, what step does the administrator need to take, assuming that vSwitch1 will still be needed for further configuration?

- A. Remove the Production port group by accessing the properties for the port group.
- B. Remove the Production port group by accessing the properties for vSwitch1.
- C. Remove the Production port group by accessing the properties for the Network.
- D. Remove the Production port group by removing vSwitch1.

Correct Answer: B

QUESTION 7

An administrator has configured hardware acceleration for a Fibre Channel storage array. After a recent maintenance event, the administrator finds that cloning and migration operations are taking excessively long to complete. Which two settings could cause hardware acceleration to become disabled? (Choose two.)

- A. VAAI Plugin Name = VMW_VAAIP_SYM
- B. VAAI Plugin Name = VMW_VAAIP_NETAPP
- C. VMFS3.HardwareAcceleratedLocking = 0

D. Datamover.HardwareAcceleratedInit = 0

Correct Answer: CD

QUESTION 8

The load is high on a HA/DRS cluster. DPM is enabled. A vSphere administrator determines that hosts are NOT powering on automatically to support the load. Which configuration would result in this condition?

- A. VM-to-VM or VM-to-Host DRS rules have been configured that restrict where some VMs can be moved.
- B. DPM has been set to the most Conservative threshold.
- C. Some of the virtual machines have been removed from HA consideration by the vSphere administrator.
- D. DRS is set to Manual Automation.

Correct Answer: D

QUESTION 9

An administrator needs to know the estimated time remaining on a virtual machine that is hosting a critical accounting application given current assigned resources such as memory, CPU, and disk. When an administrator selects the virtual machine in the vCenter Operations Manager console, which major badge should the administrator investigate to determine this information?

- A. Risk
- B. Health
- C. Efficiency
- D. Time Remaining

Correct Answer: A

QUESTION 10

An administrator needs to deploy a vSphere solution containing a number of hosts and a vSphere Distributed Switch.

Which steps should the administrator take to accomplish this?

- A. Create the vSphere Distributed Switch, deploy the ESXi hosts, and then add each host to the switch.
- B. Deploy the ESXi hosts, create an HA/DRS cluster containing the hosts, create the vSphere Distributed Switch, and then add the cluster to the switch.
- C. Create the vSphere Distributed Switch and as each ESXi host is deployed it will be automatically added to the switch.
- D. Deploy the ESXi hosts and then create the vSphere Distributed Switch on the hosts.

Correct Answer: A

QUESTION 11

-- Exhibit --- Exhibit -

The vCenter Operations Manager dashboard is showing Health issues associated with the selected virtual machine. There have been no availability or configuration issues with the virtual machine, and the workload badge is still green:

How should an administrator resolve this issue?

- A. Select the Anomalies badge to identify the cause of the abnormal behavior, then take appropriate action.
- B. Select the Stress badge to identify the cause of the increased stress, then take appropriate action.
- C. Select the Risk badge, identify the host at risk, and migrate the VM to a host with more resources.
- D. Select the Risk badge to identify how much time is remaining before CPU resources are gone, then assign more resources.

Correct Answer: A

QUESTION 12

An administrator using vCenter Operations Manager is viewing the health of an ESXi host in the environment. There have NOT been any reported outages or issues with the ESXi host, but the administrator needs to determine if the host is behaving normally. Which minor badge should the administrator investigate to determine this information?

A. Faults

B. Anomalies

C. Stress

D. Health

Correct Answer: B
