### QUESTION 1

Which file is required when performing disaster recovery of an IBM Tivoli Storage Manager V7.1 server?

- A. dsmserv.sys
- B. volume history
- C. recovery instructions
- D. database system log

Correct Answer: B

---

### QUESTION 2

When upgrading from IBM Tivoli Storage Manager (TSM) V5 to TSM V7.1, which two steps should be performed before starting the upgrade process?

- A. Back up the copy pool data.
- B. Uninstall the V5 server and client.
- C. Back up the V5 database and configuration files.
- D. Install the database configuration tool (DB2CNFG).
- E. Install the upgrade utilities package (DSMUPGRD).

Correct Answer: CE

---

### QUESTION 3

A Tivoli Storage Manager (TSM) server has been configured so it can share access to another server's SCSI tape library and drives. Which three steps must be completed before tape sharing will operate properly?

- A. The library client's tape library definition must include LI BTYPE=SCSI.
- B. The server functioning as library client must be configured for SSL communications.
- C. Scratch tapes must be checked in on the library manager for use by the library client.
- D. Each server must be successfully defined to the other using a define server command.
- E. The library manager's tape library definition must be updated to have the SHARED=YES option.
- F. Drive path definitions must be created on the library manager to allow access by the library client.

Correct Answer: ACE

---

#### QUESTION 4

What are three valid alert states in the IBM Tivoli Storage Manager Operations Center?

- A. info
- B. active
- C. critical
- D. closed
- E. inactive
- F. warning

Correct Answer: ACF

---

#### QUESTION 5

During a long period of time the backup data for a specific node is spread over many volumes. For a faster restore, how can the data be consolidated if active and inactive versions are needed for the restore?

- A. Create a new copy pool for this specific node and restore from the copy pool.
- B. Create an active data pool and copy the active versions from the primary pool hierarchy.
- C. Move the data for this node with move nodedata from all sequential storage pools to a random disk storage pool.
- D. Move the data for this node with move nodedata from the last sequential storage pool to a new sequential storage pool.

Correct Answer: C

---

#### QUESTION 6

Which three steps must be completed so SERVER-A and SERVER-B can use SSL to communicate?

- A. Each server must specify COMMETHOD SSL in its options file.
- B. Each server must be defined to the other specifying the SSL=YES parameter.
- C. Both servers must be restarted after configuring the appropriate SSL parameters.
- D. Each server's password must be replaced just prior to defining them to each other.
- E. The partner certificate of SERVER-B must be manually imported on SERVER-A and that of SERVER\_A on SERVER-B.
- F. The administrative ID used to perform the DEFINE SERVER commands must have the same PASSEXP attribute value on both servers.

Correct Answer: ABC

---

#### QUESTION 7

After defining a collocation group to a Tivoli Storage Manager server, what must be done to utilize its capabilities?

- A. Update a node in the group.
- B. Register the pool to the group.
- C. Add a new member to the group.
- D. Define a storage pool to the group.

Correct Answer: A

---

#### QUESTION 8

The IT department is requesting a disaster test of the Tivoli Storage Manager (TSM) server. The test is on a server set up without any graphical assistance. Which step is required for a successful TSM database restore?

- A. Update the server option file.
- B. Configure a DB2 API interface.
- C. Replace the volume history file.
- D. Generate a database backup copy.

Correct Answer: D

---

#### QUESTION 9

Which three operating systems support a clustered Tivoli Storage Manager server?

- A. AIX
- B. z/OS
- C. z/Linux
- D. Windows
- E. IOS (Mac)
- F. Linux (x86)

Correct Answer: ADF

---

#### QUESTION 10

The IBM Tivoli Storage Manager (TSM) Backup-Archive client has been installed on a Windows system having a working network connection with hostname WIN2K8-SRV1 and IP address 172.18.35.47. The TSM server is running and is located at IP address 172.18.35.100. No firewalls are in place and all other server and client communications parameters are left to their default values. When opening the TSM Backup-Archive client command line the result is:

```
C:\Program Files\Tivoli\TSM\baclient>dsmc
IBM Tivoli Storage Manager
Command Line Backup-Archive Client Interface
Client Version 7, Release 1, Level 0.0
Client date/time: 04/23/2014 10:07:57
(c) Copyright by IBM Corporation and other(s) 1990, 2013. All Rights Reserved.

Node Name: WIN2K8-SRV1
ANS1017E Session rejected: TCP/IP connection failure.
```

Which two steps are taken to avoid this error and successfully connect to the TSM server?

- A. Run the dsmc command again, but add the -TCPSEVERADDRESS=172.18.35.100 option.
- B. Use the Backup-Archive client GUI's Preferences editor to update the server port value: and try connecting again.
- C. Update the node's dsm.opt file to include the option TCPSEVERADDRESS 172.18.35.100, and try connecting again.
- D. Update the node's dsm.sys file to contain the option TCPSEVERADDRESS 172.18.35.100; and try connecting again.
- E. Use the Backup-Archive client GUI's Preferences editor to confirm the options file contains a valid node name, and try connecting again.

Correct Answer: B

## QUESTION 11

Which statement is true regarding a vStorage Backup Server?

- A. It only supports backup to disk.
- B. It supports only backup over LAN.
- C. It can be a virtual or a physical machine.
- D. It allows virtual machine full backups and incremental file level backups.

Correct Answer: C

## QUESTION 12

A customer has configured node replication for the first time. To validate replication for a specific node, the administrator

needs to confirm which two configurations to ensure successful validation?

- A. REPLNODE=yes on the source server.
- B. REPLICATION=yes on the source server.
- C. REPLSTATE=enabled for node on the source server.
- D. Set the target replication server from the target server.
- E. Set the target replication server from the source server.

Correct Answer: CE
