Dudley is looking to improve the performance on an XPages application he built for the marketing department. This application is not used by a large amount of users at one time. Which server page persistence setting would work best in this scenario?

- A. Server default
- B. Keep pages on disk
- C. Keep pages in memory
- D. Keep only the current page on disk

Correct Answer: C

QUESTION 10

XPages are Ajax-enabled. Which option best describes what that statement means?

- A. With Ajax, XPages can provide type-ahead.
- B. With Ajax, XPages can be partially refreshed instead of reloaded completely for each change.
- C. Ajax allows for lazy loading of content and code.

D. All of the above.

Correct Answer: D

QUESTION 11

Zachary is creating a new theme for his XPage. How is the theme file coded in the Resources area of the application?

A. XML

B. CSS

C. HTML

D. JavaScript

Correct Answer: A

QUESTION 12

Yolanda has built the XPages for the sales application. The functionality is working properly, and it is now time to apply the corporate branding. Yolanda has read that XPages can use themes and CSS for affecting the appearance of the UI. What is a distinction between themes and CSS?

A. Themes are set at the server level to control one, many, or all XML properties of all XPages running on the server. One must use CSS to customize the UI of specific applications.

B. Themes and CSS each can control all of the same items. The difference is that themes can be used to apply to some or all applications on a server, while CSS is application-specific.

C. Themes can be used to control any XML properties of any XPages running on the server, including CSS style properties. Themes are different from style sheets in that they are not restricted to CSS styles.

D. CSS is used to control the presentation of data - such properties as color, font, and positioning. Themes cannot manage the same items as CSS, but themes can be used to control functional properties such as the number of displayed view rows.

Correct Answer: C

QUESTION 13

Kaitlyn has been asked to track which browser versions people are using to access the Customers XPage. She wants to add code that writes the browser version to the server log whenever a user opens the XPage. What server-side code can Kaitlyn add to do this task?

A. Add this code in the beforePageLoad event of the XPage:var req = facesContext.getExternalContext().getRequest();print(req.getHeader("User-Agent"));

B. Add this code in the onLoad event of the XPage:var req = facesContext.getExternalContext().getRequest();print(req.get(HTTP_USER_AGENT));

C. Add this code in the onLoad event of the XPage:print(headerValues.getHeader(HTTP_USER_AGENT));

D. Add this code in the beforePageLoad event of the XPage:print(headerValues.getHeader("User-Agent"));

Correct Answer: A

QUESTION 14

How do you get a collection of all documents of the current database in an XPages environment?

A. var documents = database.getAllDocuments();

B. var db:NotesDatabase = session.CurrentDatabase;var documents = db.AllDocuments();

C. var ws = session.getCurrentWorkspace;var db = ws.CurrentDatabase;var documents = db.AllDocuments();

D. var s:NotesSession = new NotesSession;var db = s.getCurrentDatabase();var documents = db.getAllDocuments();

Correct Answer: A

QUESTION 15

Gustav has added a View control to his XPage. He needs to allow users to delete documents from the view. How can he do this task?

A. Add a button with a simple action defined to Delete Selected Documents.

B. Enable the Column Display property check box and the View property Allow Deletion.

C. Enable the Column Display property check box and add a button with a simple action defined to Delete Selected Documents.

D. Enable the Column Display property check box, and add a button with server-side JavaScript in the button's onclick event that uses the @Function script library to execute @Command [(DeleteDocument)].
