**QUESTION 1**

You are using the Match Designer with a One-source match specification. You have attempted to configure the match specification test environment and received an error when you selected '\\Update\\'. What is the most likely cause of the problem.

- A. The '\\Configuration File Location\\' is blank.
- B. The '\\Maximum Frequency Value\\' is blank.
- C. The '\\Data Sample Data Set\\' is not a Data Set.
- D. The Test Results Database\\' is not a defined connector.

Correct Answer: B

QUESTION 2

Which data type(s) will NOT be supported by Standardization?

- A. Binary.
- B. Integer.
- C. Non-vector data types.
- D. Non-aggregate data types.

Correct Answer: A

QUESTION 3

A match review was just completed and determined that individuals with different middle names are being grouped together.

Which option would be effective in breaking these two individuals apart?

- A. Decrease the value of the m-prob for the middle name
- B. Set the override file A missing weight for middle name.
- C. Set the override disagreement weight for middle name.
- D. Set the override disagreement weight for primary name.

Correct Answer: C

QUESTION 4

When reviewing the results of a Match job you notice that some records are not included in a match group.

Which option would you review to determine why the records are not matching?

- A. Change the Match cut-off to-100.
- B. Change the Survive rule to include Residual records.
- C. Check the records for missing data values in the block fields.
- D. Change the match from Two-source many-to-many to Two-source one-to-many.

Correct Answer: A

QUESTION 5

Once changes are introduced in a Rules Set, which option confirms the new rules set works properly with your data?

- A. Run the Rules Tester.
- B. Have users check manually.
- C. Check the Unhandled tokens.
- D. Run the job again and confirm results.

Correct Answer: D

QUESTION 6

When would you use the survive technique \"Most Frequent\"?

- A. When more than one target field is required.
- B. When the most frequent occurrence is required.
- C. When the most frequently populated value is required.
- D. When the most frequently populated value is required with two or more occurrences.

Correct Answer: D

QUESTION 7

An initial match specification is built and executed- The match executes slower than expected and it is suspected that blocking may be a factor.

Which option would be effective in determining if the block sizes are too large?

- A. Create an investigation routine using the blocking fields for each match pass.

- B. Review the match specification test results graph to determine blocking results.
- C. Add disagreement weight to key fields where appropriate to break apart matches.
- D. Analyze the blocking fields within the match specification to see if there are enough fields.

Correct Answer: A

QUESTION 8

What two approaches to use when determining fields to use for blocking?

- A. Investigate the combination of fields to assess block sizes.
- B. Selecting which field to use will have little impact on the matching results.
- C. Select fields with high data frequencies even if default values are present.
- D. Each field should be investigated to determine completeness and validity.
- E. Use as few fields as possible in the blocking phase so more records are grouped.

Correct Answer: BE

QUESTION 9

How can Word Investigation reports be used to modify a rule set?

- A. Corrects spelling errors in the data field.
- B. Adds tokens to allow identification of additional duplicates.
- C. Identifies new tokens to allow additional words to be classified.
- D. Identifies matched words to be used in match designer frequency distribution.

Correct Answer: A

QUESTION 10

What pattern would search from the end of the string to find a pattern that ends with a number?

- A. *^
- B. #^
- C. ,^ | \$
- D. #^ | \$

Correct Answer: C

QUESTION 11

What will improve classifications if there are a large amount of "@" and "?" symbols in a standardization pattern report?

- A. Word with Advanced options.
- B. Word with special symbol processing options.
- C. Character Discrete on all unhandled patterns.
- D. Character Concatenate on selected columns.

Correct Answer: A

QUESTION 12

Which statement is true?

- A. Complex Boolean survivorship rules are permitted.
- B. The first defined survivorship rule takes precedence.
- C. Complex fuzzy matching survivorship rules are permitted.
- D. Blank fields are automatically dropped from survivorship consideration.

Correct Answer: B

QUESTION 13

Which statement describe the benefits of parsing data?

- A. Optimized database loading.
- B. Application of phonetic codings.
- C. Access to individual data tokens.
- D. Pre-processing of country specific data.

Correct Answer: A

QUESTION 14

Which of these statements is NOT true?

- A. NLS can only process multi-byte characters.
- B. NLS supports various languages and countries.

C. You can process Japanese data in an English version of QualityStage.

D. When installing a non-English language version of QualityStage, NLS is enabled automatically.

Correct Answer: B

QUESTION 15

Which acronym is also referred to as CASS?

A. AVI.

B. GEO.

C. MNS.

D. US AC.

Correct Answer: D
