- A. Word with Advanced options.

- B. Word with special symbol processing options.
- C. Character Discrete on all unhandled patterns.
- D. Character Concatenate on selected columns.

Correct Answer: A

QUESTION 5

A client's data has information from several source systems combined into a single input file. The data needs to be matched within source system and all data must be retained. There is a field present in the data which identifies the source system.

Which approach would best accomplish this task?

- A. Pass all the data into a Match One-source stage blocking on the Source System field.
- B. Pass all the data into a Remove Duplicates stage and process the remaining data into an One- source match blocking on the Source System field.
- C. Separate the data by source system using a Filter stage, pass each sources system's data through an One-source match and match on the Source System field.
- D. Sort the data by source system, pass the data through a Remove Duplicates stage and pass the data to a Two-source match stage blocking on the Source System field.

Correct Answer: A

QUESTION 6

When would you use the survive technique \"Most Frequent\"?

- A. When more than one target field is required.
- B. When the most frequent occurrence is required.
- C. When the most frequently populated value is required.
- D. When the most frequently populated value is required with two or more occurrences.

Correct Answer: D

QUESTION 7
