**QUESTION 1**

You need to set up an SAP HANA system where several companies share the same SAP HANA instance. You have to provide each company a dedicated share of the instance for its data, configuration and user management.

Which deployment scenario do you use? Please choose the correct answer. Response:

- A. Multitenant database containers (MDC)
- B. Technical co-deployment (TCD)
- C. Multiple Components on One Database (MCOD)
- D. Multiple Components on One System (MCOS)

Correct Answer: A

QUESTION 2

Which of the following Inter-Service Communication properties binds the processes to entered address only and to all local host interfaces?

Choose the correct answer.

Response:

- A. Global
- B. Internal
- C. Local

Correct Answer: B

QUESTION 3

Which of the following statements are true regarding In-Memory computing security?

There are 2 correct answers to this question.

Response:

- A. Data and undo log information (part of data) are automatically saved to disk at regular savepoints
- B. The log is also saved to disk continuously and synchronously after each COMMIT of a database transaction
- C. The redo log captures last 5 minutes changes by database transactions
- D. After a power failure the system returns to its last consistent state by replaying the undo log since the last savepoint

Correct Answer: AB

QUESTION 4

What is scale-out?

There are 2 correct answers to this question.

Response:

- A. Use of standby servers in the event of hardware failure.
- B. Use of remote servers to store archived data that is rarely used.
- C. Use of commodity servers that are used in high volume steaming applications.
- D. Use of multiple servers to spread processing and improve performance.

Correct Answer: AD

QUESTION 5

You implement a multi-host SAP HANA system with auto-failover capabilities. What are the requirements for the disk storage?

There are 2 correct answers to this question.

Response:

- A. The slave node is set to backup standby.
- B. The failed worker host gets fenced during failover.
- C. The standby host has file access.
- D. The master node is fully clustered.

Correct Answer: BC

QUESTION 6

How is a savepoint triggered in SAP HANA? Please choose the correct answer. Response:

- A. By performing a soft shutdown
- B. By committing a transaction
- C. By starting a log backup
