## QUESTION 1

After downloading and loading a mobile app, the user is presented with an account registration page requesting the user to provide certain personal details. Two statements are also displayed on the same page along with a box for the user to check to indicate their confirmation:

Statement 1 reads: "Please check this box to confirm you have read and accept the terms and conditions of the end user license agreement" and includes a hyperlink to the terms and conditions.

Statement 2 reads: "Please check this box to confirm you have read and understood the privacy notice" and includes a hyperlink to the privacy notice.

Under the General Data Protection Regulation (GDPR), what lawful basis would you primarily expect the privacy notice to refer to?

- A. Consent.
- B. Vital interests.
- C. Legal obligation.
- D. Legitimate interests.

Correct Answer: A

---

## QUESTION 2

### SCENARIO

Please use the following to answer the next question:

Chuck, a compliance auditor for a consulting firm focusing on healthcare clients, was required to travel to the client's office to perform an onsite review of the client's operations. He rented a car from Finley Motors upon arrival at the airport as

so he could commute to and from the client's office. The car rental agreement was electronically signed by Chuck and included his name, address, driver's license, make/model of the car, billing rate, and additional details describing the rental

transaction. On the second night, Chuck was caught by a red light camera not stopping at an intersection on his way to dinner. Chuck returned the car back to the car rental agency at the end week without mentioning the infraction and Finley

Motors emailed a copy of the final receipt to the address on file.

Local law enforcement later reviewed the red light camera footage. As Finley Motors is the registered owner of the car, a notice was sent to them indicating the infraction and fine incurred. This notice included the license plate number,

occurrence date and time, a photograph of the driver, and a web portal link to a video clip of the violation for further review. Finley Motors, however, was not responsible for the violation as they were not driving the car at the time and

transferred the incident to AMP Payment Resources for further review. AMP Payment Resources identified Chuck as the driver based on the rental agreement he signed when picking up the car and then contacted Chuck directly through

a

written letter regarding the infraction to collect the fine.

After reviewing the incident through the AMP Payment Resources' web portal, Chuck paid the fine using his personal credit card. Two weeks later, Finley Motors sent Chuck an email promotion offering 10% off a future rental.

How can Finley Motors reduce the risk associated with transferring Chuck's personal information to AMP Payment Resources?

- A. By providing only the minimum necessary data to process the violation notice and masking all other information prior to transfer.
- B. By requesting AMP Payment Resources delete unnecessary datasets and only utilize what is necessary to process the violation notice.
- C. By obfuscating the minimum necessary data to process the violation notice and require AMP Payment Resources to secure store the personal information.
- D. By transferring all information to separate datafiles and requiring AMP Payment Resources to combine the datasets during processing of the violation notice.

Correct Answer: A

To reduce the risk associated with transferring Chuck's personal information to AMP Payment Resources, Finley Motors could take several steps. One such step would be option A: By providing only the minimum necessary data to process the violation notice and masking all other information prior to transfer. By providing only the minimum necessary data to process the violation notice and masking all other information prior to transfer, Finley Motors can help reduce the risk associated with transferring Chuck's personal information. This can help ensure that only necessary data is shared and that any unnecessary or sensitive data is protected.

---

### QUESTION 3

What is an Access Control List?

- A. A list of steps necessary for an individual to access a resource.
- B. A list that indicates the type of permission granted to each individual.
- C. A list showing the resources that an individual has permission to access.
- D. A list of individuals who have had their access privileges to a resource revoked.

Correct Answer: B

---

### QUESTION 4

Which of the following is an example of the privacy risks associated with the Internet of Things (IoT)?

- A. A group of hackers infiltrate a power grid and cause a major blackout.
- B. An insurance company raises a person's rates based on driving habits gathered from a connected car.

- C. A website stores a cookie on a user's hard drive so the website can recognize the user on subsequent visits.
- D. A water district fines an individual after a meter reading reveals excess water use during drought conditions.

Correct Answer: B

---

## QUESTION 5

### SCENARIO

Please use the following to answer the next questions:

Your company is launching a new track and trace health app during the outbreak of a virus pandemic in the US. The developers claim the app is based on privacy by design because personal data collected was considered to ensure only necessary data is captured, users are presented with a privacy notice, and they are asked to give consent before data is shared. Users can update their consent after logging into an account, through a dedicated privacy and consent hub. This is accessible through the 'Settings' icon from any app page, then clicking 'My Preferences', and selecting 'Information Sharing and Consent' where the following choices are displayed:

1.  
"I consent to receive notifications and infection alerts";
2.  
"I consent to receive information on additional features or services, and new products";
3.  
"I consent to sharing only my risk result and location information, for exposure and contact tracing purposes";
4.  
"I consent to share my data for medical research purposes"; and
5.  
"I consent to share my data with healthcare providers affiliated to the company".

For each choice, an ON\* or OFF tab is available The default setting is ON for all

Users purchase a virus screening service for USS29 99 for themselves or others using the app The virus screening service works as follows:

1.  
Step 1 A photo of the user's face is taken.
2.  
Step 2 The user measures their temperature and adds the reading in the app
3.  
Step 3 The user is asked to read sentences so that a voice analysis can detect symptoms

4.

Step 4 The user is asked to answer questions on known symptoms

5.

Step 5 The user can input information on family members (name date of birth, citizenship, home address, phone number, email and relationship.)

The results are displayed as one of the following risk status "Low. "Medium" or "High" if the user is deemed at "Medium" or "High" risk an alert may be sent to other users and the user is invited to seek a medical consultation and diagnostic from a healthcare provider.

A user's risk status also feeds a world map for contact tracing purposes, where users are able to check if they have been or are in close proximity of an infected person. If a user has come in contact with another individual classified as "medium" or "high" risk an instant notification also alerts the user of this. The app collects location trails of every user to monitor locations visited by an infected individual. Location is collected using the phone's GPS functionality, whether the app is in use or not however, the exact location of the user is "blurred" for privacy reasons. Users can only see on the map circles.

Which of the following is likely to be the most important issue with the choices presented in the "Information Sharing and Consent" pages?

- A. The data and recipients for medical research are not specified
- B. Insufficient information is provided on notifications and infection alerts
- C. The sharing of information with an affiliated healthcare provider is too risky
- D. Allowing users to share risk result information for exposure and contact tracing purposes

Correct Answer: A

Not specifying the data and recipients for medical research can make it difficult for users to make informed decisions about whether to consent to this type of information sharing. This lack of transparency could result in personal information being shared with third parties without the user's full understanding or consent.

---

## QUESTION 6

What occurs during data distortion?

- A. False and inaccurate information about an individual is shared
- B. Data collected about an individual includes prejudicial assumptions
- C. The personal data about an individual is modified to preserve their anonymity
- D. Truthful information that negatively affects how others view an individual is revealed

Correct Answer: C

---

## QUESTION 7

Information classification helps an organization protect confidential and nonpublic information primarily because?

- A. It helps identify sensitive and critical information that require very strict safeguards.
- B. It falls under the security principles of confidentiality, integrity, and availability.
- C. It promotes employee accountability for safeguarding confidential information.
- D. It is legally required under most regulations.

Correct Answer: A

Information classification helps an organization protect confidential and nonpublic information primarily because it helps identify sensitive and critical information that require very strict safeguards.

---

### QUESTION 8

Which activity would best support the principle of data quality?

- A. Providing notice to the data subject regarding any change in the purpose for collecting such data.
- B. Ensuring that the number of teams processing personal information is limited.
- C. Delivering information in a format that the data subject understands.
- D. Ensuring that information remains accurate.

Correct Answer: D

Reference: <https://iapp.org/resources/article/fair-information-practices/> The principle of data quality states that personal data should be relevant to the purposes for which they are to be used and, to the extent necessary for those purposes, should be accurate, complete, and up to date<sup>1</sup>. Therefore, ensuring that information remains accurate is an activity that would best support this principle<sup>1</sup>. The other options are not directly related to the principle of data quality, but rather to other principles such as purpose specification, security safeguards, or openness.

---

### QUESTION 9

Which of these is NOT one of four elements of a design pattern?

- A. A problem description
- B. A pattern name
- C. A set of risks
- D. A solution

Correct Answer: C

---

### QUESTION 10

## SCENARIO

Tom looked forward to starting his new position with a U.S --based automobile leasing company (New Company), now operating in 32 states. New Company was recently formed through the merger of two prominent players, one from the eastern region (East Company) and one from the western region (West Company). Tom, a Certified Information Privacy Technologist (CIPT), is New Company's first Information Privacy and Security Officer. He met today with Dick from East Company, and Harry, from West Company. Dick and Harry are veteran senior information privacy and security professionals at their respective companies, and continue to lead the east and west divisions of New Company. The purpose of the meeting was to conduct a SWOT (strengths/weaknesses/opportunities/threats) analysis for New Company. Their SWOT analysis conclusions are summarized below.

Dick was enthusiastic about an opportunity for the New Company to reduce costs and increase computing power and flexibility through cloud services. East Company had been contemplating moving to the cloud, but West Company already had a vendor that was providing it with software-as-a-service (SaaS). Dick was looking forward to extending this service to the eastern region. Harry noted that this was a threat as well, because West Company had to rely on the third party to protect its data.

Tom mentioned that neither of the legacy companies had sufficient data storage space to meet the projected growth of New Company, which he saw as a weakness. Tom stated that one of the team's first projects would be to construct a consolidated New Company data warehouse. Tom would personally lead this project and would be held accountable if information was modified during transmission to or during storage in the new data warehouse.

Tom, Dick and Harry agreed that employee network access could be considered both a strength and a weakness. East Company and West Company had strong performance records in this regard; both had robust network access controls that were working as designed. However, during a projected year-long transition period, New Company employees would need to be able to connect to a New Company network while retaining access to the East Company and West Company networks.

When employees are working remotely, they usually connect to a Wi-Fi network. What should Harry advise for maintaining company security in this situation?

- A. Hiding wireless service set identifiers (SSID).
- B. Retaining the password assigned by the network.
- C. Employing Wired Equivalent Privacy (WEP) encryption.
- D. Using tokens sent through HTTP sites to verify user identity.

Correct Answer: D

---

## QUESTION 11

What is the main benefit of using a private cloud?

- A. The ability to use a backup system for personal files.
- B. The ability to outsource data support to a third party.
- C. The ability to restrict data access to employees and contractors.
- D. The ability to cut costs for storing, maintaining, and accessing data.

Correct Answer: C

---

**QUESTION 12**

Which of the following technologies presents the most challenges to organizations when obtaining and demonstrating valid consent from individuals?

- A. Chatbots.
- B. Speech recognition.
- C. Internet of Things (IoT).
- D. Robotic Process Automation (RPA).

Correct Answer: C

---

**QUESTION 13**

Which is the most accurate type of biometrics?

- A. DNA
- B. Voiceprint.
- C. Fingerprint.
- D. Facial recognition.

Correct Answer: A

Reference: <https://www.bayometric.com/biometrics-face-finger-iris-palm-voice/>

---

**QUESTION 14**

One-way hash functions can be used is to?

- A. Verify a password in a secure way.
- B. Recover a credit card number at refund
- C. Encrypt a document for confidentiality.
- D. Secure an end-to-end communication.

Correct Answer: A

---

**QUESTION 15**

After stringent testing an organization has launched a new web-facing ordering system for its consumer medical products. As the medical products could provide indicators of health conditions, the organization could further

strengthen its privacy controls by deploying?

- A. Run time behavior monitoring.
- B. A content delivery network.
- C. Context aware computing.
- D. Differential identifiability.

Correct Answer: D

Differential identifiability is a strong method to enhance privacy controls, especially for sensitive data such as medical products that could indicate health conditions. This approach involves modifying data in a way that maintains its utility while making it difficult to identify specific individuals from the dataset. Differential identifiability provides a statistical assurance that an individual's data does not affect the overall outcome of data analysis significantly, thus protecting individual privacy while allowing for the data's use in research or other applications. Implementing this method would strengthen the privacy controls of the organization's web-facing ordering system by ensuring that the sensitive information it processes is protected against identification risks.
