**QUESTION 1**

A developer must create an Apex class, `ContactController`, that a Lightning component can use to search for Contact records. User of the Lightning component should only be able to search Contact records to which they have access. Which two will restrict the records correctly?

- A. `public class ContactController`
- B. `public with sharing class ContactController`
- C. `public without sharing class ContactController`
- D. `public inherited sharing class ContactController`

Correct Answer: BD

QUESTION 2

Universal Containers (UC) decided it will not to send emails to support personnel directly from Salesforce in the event that an unhandled exception occurs. Instead, UC wants an external system be notified of the error. What is the appropriate publish/subscribe logic to meet these requirements?

- A. Publish the error event using the `addError()` method and have the external system subscribe to the event using CometD.
- B. Publish the error event using the `Eventbus.publish()` method and have the external system subscribe to the event using CometD.
- C. Have the external system subscribe to the `BatchApexError` event, no publishing is necessary.
- D. Publish the error event using the `addError()` method and write a trigger to subscribe to the event and notify the external system.

Correct Answer: B

QUESTION 3

A developer wants to invoke an outbound message when a record meets a specific criteria. Which three features satisfy this use case? (Choose three.)

- A. Process builder can be used to check the record criteria and send an outbound message with Apex Code.
- B. Process builder can be used to check the record criteria and send an outbound message without Apex Code.
- C. Approval Process has the capability to check the record criteria and send an outbound message without Apex Code.
- D. Workflows can be used to check the record criteria and send an outbound message.
- E. Visual Workflow can be used to check the record criteria and send an outbound message without Apex Code.

Correct Answer: CDE

**QUESTION 4**

Which code segment can be used to control when the `dowork()` method is called?

- A. `For (Trigger.isRunning t: Trigger.new) { dowork(); }`
- B. `If(Trigger.isRunning) dowork();`
- C. `For (Trigger.isInsert t: Trigger.new) { dowork(); }`
- D. `If(Trigger.isInsert) dowork();`

Correct Answer: D

QUESTION 5

Which requirement needs to be implemented by using standard workflow instead of Process Builder? Choose 2 answers

- A. Create activities at multiple intervals.
- B. Send an outbound message without Apex code.
- C. Copy an account address to its contacts.
- D. Submit a contract for approval.

Correct Answer: BC

QUESTION 6

A company would like to send an offer letter to a candidate, have the candidate sign it electronically, and then send the letter back. What can a developer do to accomplish this?

- A. Create a visual workflow that will capture the candidate's signature electronically
- B. Develop a Process Builder that will send the offer letter and allow the candidate to sign it electronically.
- C. Install a managed package that will allow the candidate to sign documents electronically
- D. Create an assignment rule that will assign the offer letter to the candidate

Correct Answer: C

QUESTION 7

What must the Controller for a Visualforce page utilized to override the standard Opportunity view button?

- A. A constructor that initialized a private Opportunity variable.

- B. A callback constructor to reference the StandardController
- C. The StandardSetController to support related lists for pagination
- D. The Opportunity StandardController for pre-built functionality

Correct Answer: D

QUESTION 8

A business has a proprietary Order Management System (OMS) that creates orders from their website and fulfills the orders. When the order is created in the OMS, an integration also creates an order record in Salesforce and relates it to the contact as identified by the email on the order. As the order goes through different stages in the OMS, the integration also updates it in Salesforce. It is noticed that each update from the OMS creates a new order record in Salesforce.

Which two actions will prevent the duplicate order records from being created in Salesforce? Choose 2 answers

- A. Ensure that the order number in the OMS is unique.
- B. Use the order number from the OMS as an external ID.
- C. Use the email on the contact record as an external ID.
- D. Write a before trigger on the order object to delete any duplicates.

Correct Answer: AD

QUESTION 9

Where can a developer identify the time taken by each process in a transaction using Developer Console log inspector?

- A. Performance Tree tab under Stack Tree panel
- B. Execution Tree tab under Stack Tree panel
- C. Timeline tab under Execution Overview panel
- D. Save Order tab under Execution Overview panel

Correct Answer: C

QUESTION 10

What is the debug output of the following apex code? `Decimal thevalue; system.debug(thevalue);`

- A. Undefined
- B. 0

C. Null

D. 0.0

Correct Answer: C

QUESTION 11

The Account object in an organization has a master detail relationship to a child object called Branch. The following automations exist:

1.

Rollup summary fields

2.

Custom validation rules

3.

Duplicate rules

A developer created a trigger on the Account object.

What two things should the developer consider while testing the trigger code?

Choose 2 answers

A. Rollup summary fields can cause the parent record to go through Save.

B. The trigger may fire multiple times during a transaction.

C. Duplicate rules are executed once all DML operations commit to the database.

D. The validation rules will cause the trigger to fire again.

Correct Answer: AB

QUESTION 12

A developer has created a Visualforce Page and Apex Controller that uses the With Sharing keyword. The page will be used of by Sales Managers and should only display Accounts owned by Sales

Representatives who report to the running Sales Manager. The organization-wide sharing for Accounts is set to Private. Which additional set of stops should the developer take?

A. Create one Profile, two Permission Sets, and one Role.

B. Create one Profile, one Permission Set, and one Role.

C. Create one Profile, one Permission Set, and two Roles.

D. Create two Profiles, one Permission Set, and one Role.

Correct Answer: C

QUESTION 13

A developer has a Visualforce page and custom controller to save Account records. The developer wants to display any validation rule violation to the user. How can the developer make sure that validation rule violations are displayed?

- A. Add custom controller attributes to display the message.
- B. Include on the Visualforce page.
- C. Use a try/catch with a custom exception class.
- D. Perform the DML using the Database.upsert() method.

Correct Answer: B

QUESTION 14

Which scenario is invalid for execution by unit tests?

- A. Executing methods for negative test scenarios
- B. Loading the standard Pricebook ID using a system method
- C. Loading test data in place of user input for Flows.
- D. Executing methods as different users.

Correct Answer: C

QUESTION 15

A developer working on a time management application wants to make total hours for each timecard available to applications users. A timecard entry has a Master-Detail relationship to a timecard. Which approach should the developer use to accomplish this declaratively?

- A. A visualforce page that calculates the total number of hours for a timecard and displays it on the page.
- B. An Apex trigger that uses an Aggregate Query to calculate the hours for a given timecard and stores it in a custom field.
- C. A Roll-up Summary field on the Timecard Object that calculates the total hours from timecard entries for that timecard.
- D. A Process Builder process that updates a field on the timecard entry is created.

Correct Answer: C
