#### QUESTION 1

Which Celerra component exports file systems for NFS and CIFS access?

- A. Control Station
- B. DAE2
- C. Data Mover
- D. Storage processor

Correct Answer: C

---

#### QUESTION 2

An administrator configured Data Mover network devices to transmit frames on all links for redundancy.

Which network configuration was used to accomplish this?

- A. LACP
- B. Proxy ARP
- C. Ethernet channel
- D. RARP

Correct Answer: A

---

#### QUESTION 3

Which benefit is achieved by assigning a VLAN tag to a network interface on a Data Mover?

- A. Ability to access different VLANs through one physical port
- B. Increases performance and throughput in the event of a failover
- C. Load balancing
- D. Port failover

Correct Answer: A

---

#### QUESTION 4

A customer has reported that two file systems that were originally mounted on a Sun server are now unmounted after a reboot. What is a possible cause?

- A. File systems always need to be manually remounted after a reboot
- B. File systems were soft mounted
- C. Fixed mount of the file system was used
- D. Hard mount of the file systems was used

Correct Answer: B

---

#### QUESTION 5

When troubleshooting slow performance on a Data Mover, a network trace has just been captured. When the trace is opened, a very large number of TCP retransmissions are observed. What is the most likely cause for these retransmissions?

- A. Duplicate IP addresses
- B. Invalid broadcast address
- C. Speed and duplex mismatch
- D. TCP window size is too large

Correct Answer: C

---

#### QUESTION 6

In an iSCSI environment, which type of authentication can the Celerra use?

- A. CHAP
- B. IPSec
- C. Kerberos
- D. SSL

Correct Answer: A

---

#### QUESTION 7

After a power outage, you notice the Control Station has not powered up but users have access to their data. How do you explain the data access?

- A. Once a Data Mover is configured it operates independently from the Control Station.
- B. Since the Control Station was unavailable, the standby Data Mover was activated.
- C. Users have the data cached on their workstations.

D. Data was being accessed directly from the back-end storage.

Correct Answer: A

---

### QUESTION 8

A customer has two locations separated by a 22 kms data link distance. The systems administrator needs a disaster recovery solution with zero data loss, mirroring the production data from the primary site to the secondary site.

The administrator also requires a read-only copy at the secondary site for backups and application testing.

Which Celerra solution would best meet this requirement?

- A. Celerra Replicator
- B. FarCopy
- C. NearCopy
- D. SnapSure

Correct Answer: C

---

### QUESTION 9

A customer has a fully populated NS704G. Three servers will be loaded as primary servers with the fourth in standby mode. One of the primary servers (server\_2) will provide access to mission-critical data. The other two servers (server\_3 and server\_4) will share out archived data for backup purposes.

In case of Data Mover failure, which standby policies can be invoked on server\_2, server\_3, and server\_4 to ensure that mission-critical data receives priority status?

- A. Auto on server\_2, retry on server\_3 and server\_4
- B. Manual on server\_2, retry on server\_3 and server\_4
- C. Override on server\_2, manual on server\_3 and server\_4
- D. Priority on server\_2, manual on server\_3 and server\_4

Correct Answer: A

---

### QUESTION 10

Upon issuing the NSLOOKUP command, the following error message is returned:

```
*** can't find server name for address 192.168.10.5
```

Which record is missing from the DNS zone?

- A. Forward Zone

- B. Name Server
- C. PTR
- D. Start of Authority

Correct Answer: C

---

#### QUESTION 11

One of the Celerras in the data center dropped all client access suddenly. Upon further investigation, you discover that the primary blade is in a panicked state but did not fail over to the standby blade.

What is one possible cause for this?

- A. The Control Station was powered off.
- B. The standby blade was running at reason code 5.
- C. The primary blade was unable to ping the standby blade.
- D. The Control Station had NAS services started.

Correct Answer: A

---

#### QUESTION 12

You have moved a VDM from one Data Mover to another. Now the users cannot access the data. What could cause this condition?

- A. Interface names are different to the source VDM.
- B. Target Data Mover sees all file systems of the source VDM.
- C. You keep the same IP addresses.
- D. The IP address on the target Data Mover is set before the move.

Correct Answer: A

---

#### QUESTION 13

Which Celerra quota implementation choice is responsible for absolute limits on disk block usage?

- A. Hard
- B. Limited
- C. Soft
- D. Tracking

Correct Answer: A

---

#### QUESTION 14

Using HyperTerminal and the proper cable, you have connected your service laptop to the Control Station com port. After booting the Control Station with a non-edited boot floppy, you are now at the boot prompt.

Which option could you choose to complete a new install of a Celerra NS?

- A. install
- B. kickstart
- C. serialinstall
- D. serialkickstart

Correct Answer: C

---

#### QUESTION 15

In configuring a customer's Celerra for network access, which device name is referenced when assigning an IP address to a Data Mover?

- A. ace
- B. ana
- C. cge
- D. fcp

Correct Answer: C
