QUESTION 1

Which Microsoft VSS component ensures that the application data is consistent when a shadow copy is created?

A. Writer

B. Requestor

C. Provider

D. Interceptor

Correct Answer: A

QUESTION 2

A customer has recently purchased a Data Domain appliance to use with EMC NetWorker as the primary storage. The backup administrator needs to configure EMC NetWorker so that multiple backups and recoveries can be performed from a single device at any given time. What type of device should the backup administrator configure?

A. AFTD

B. LTO

C. FTD

D. NFS

Correct Answer: A

QUESTION 3

Which type of device is referred to as a BOOST device?

A. Data Domain

B. File Type

C. Advance File Type

D. Cloud

Correct Answer: A

QUESTION 4

An Administrator found a corruption on Resource Files on an EMC NetWorker Server. Which type of recovery should the administrator use?

A. Disaster

B. Save Set

C. Browsable

D. Direct

Correct Answer: A

QUESTION 5

In an EMC NetWorker environment, which access options are required for directed recoveries?

A. Source client must allow destination client access to its backup data.

B. Destination client must allow a remote execution request from the source client.

C. Source client must allow a remote execution request from the destination client.

D. Administering client must permit the destination client to access the source backup.

Correct Answer: A

QUESTION 6

What is the default port number for the Dell EMC NetWorker server to authenticate the NMC server host?

A. 7937

B. 7938

C. 9000

D. 9090

Correct Answer: D

QUESTION 7

Your Oracle DBA runs an RMAN script via cron to back up their data to an EMC NetWorker server. You run a report using the NetWorker Management Console (NMC) to view all backup activity. The Oracle backups are missing from the report.

How do you explain this?

A. An NMC status report needs to be run on the Oracle client to see this information.

B. A save set detail report needs to be run via NMC to see RMAN backups.

C. You need to run an event summary in NMC to see data backed up using a NetWorker module.

D. Data that is backed up manually is not tracked by NMC reporting.

Correct Answer: D

QUESTION 8

Which daemon supports remote execution requests for backup requested by EMC NetWorker Management Console?

A. nsrfsra

B. nsrexecd

C. nsrjobd

D. nsrd

Correct Answer: A

QUESTION 9

An EMC NetWorker administrator notices that clients are being backed up one at a time, even though they are scheduled to start simultaneously.

What may be a cause of this?

A. Server parallelism is set to 1

B. There is only one volume labeled

C. Client parallelism is set to 1

D. There is only one pool configured

Correct Answer: A

QUESTION 10

Which Dell EMC NetWorker resource represents a collection of NetWorker-labeled volumes?

A. Pool

B. Volume

C. Save set

D. Media database

Correct Answer: A

Reference: https://www.emc.com/collateral/TechnicalDocument/docu81524.pdf(p.77)

QUESTION 11

A EMC NetWorker administrator needs to provide customizable backup reporting, alerting, monitoring, and correlation analysis capabilities across an entire backup environment. Which EMC application should the backup administrator use?

A. EMC Data Protection Advisor

B. EMC NetWorker Management Console

C. EMC HomeBase

D. EMC Avamar

Correct Answer: A

QUESTION 12

A Dell EMC NetWorker backup is configured as a probe-based backup. What must be configured in the workflow for this backup?

A. Probe and backup actions

B. Backup and clone actions

C. Probe action only

D. Check Connectivity and probe actions

Correct Answer: A

Reference: https://www.emc.com/collateral/TechnicalDocument/docu81524.pdf(p.409)

QUESTION 13

An EMC NetWorker administrator has two Microsoft Exchange servers and one Microsoft SharePoint distributed farm that reside on an EMC CLARiiON disk array.

The backup administrator has the following two recovery requirements:

(1)

 The ability to recover both Exchange and SharePoint data by leveraging Microsoft VSS framework.

(2)

 The ability to roll back an entire volume to a previous point-in-time.

What is a recommended recovery solution?

A. EMC NetWorker Module for Microsoft Applications with EMC VSS Provider.

B. EMC NetWorker Module for Databases and Applications with EMC VSS Provider.

C. EMC NetWorker Module for Microsoft Applications with Microsoft VSS Provider.

D. EMC NetWorker Module for Databases and Applications with Microsoft VSS Provider.

Correct Answer: A

QUESTION 14

In EMC NetWorker what will automatically mount and label a scratch volume when needed?

A. Auto Media Management

B. Dynamic Drive Sharing

C. nsrjb

D. nsrmmdb

Correct Answer: A

QUESTION 15

You have successfully configured three SQL servers for backup with the EMC NetWorker Module for SQL. These servers are configured as follows:

Save set: MSSQL: All three clients are in the same group Data for this group is sent to the SQL_Bkup pool

Scheduled backup of the group shows that all SQL data from the three servers was successfully backed

up. However, when you attempt to recover the SQL data using the standard NetWorker user GUI, you only see file system data to recover.

What must you do to recover the SQL data backed up with the NetWorker module?

A. Launch the NetWorker User for SQL.

B. Modify the browse time within the NetWorker user GUI to show the period for which you want to recover.

C. Use the Microsoft SQL Server native tools to recover the data from NetWorker.

D. Modify the save set to include an instance or database name after MSSQL:.

Correct Answer: A
