**QUESTION 1**

Separation technology of the control plane and forwarding plane is SDN.

- A. TRUE
- B. FALSE

Correct Answer: B

QUESTION 2

MPLS forwards data packets based on labels. How is IP packets passing through the MPLS domain forwarded if they do not carry any label?

- A. Common IP forwarding
- B. ATM forwarding
- C. Multi-label MPLS forwarding
- D. Single-label MPLS forwarding

Correct Answer: A

QUESTION 3

Which command is used to enable association between BFD and static default route?

- A. ip route-static 0.0.0.0 0.0.0.0 10.0.12.2 bfd-session 1
- B. ip route-static 0.0.0.0 0.0.0.0 10.0.12.2 track bfd-session 1
- C. ip route-static 0.0.0.0 0.0.0.0 10.0.12.2 track 1
- D. ip route-static 0.0.0.0 0.0.0.0 10.0.12.2 track session 1

Correct Answer: B

QUESTION 4

Which information cannot be used for classifying IP packets at the network layer?

- A. Packet length
- B. VLAN ID
- C. Source and destination IP addresses
- D. ToS field

Correct Answer: B

QUESTION 5

Which packet information can be used for complex traffic classification? (Multiple Choice)

- A. Packet length
- B. Source and destination addresses
- C. Protocol type
- D. Source and destination MAC addresses

Correct Answer: A

QUESTION 6

The session-based stateful detection firewall processes the first packet and subsequent packets in different manners. Which of the following statements are true? (Multiple Choice)

- A. When a packet reaches the firewall the firewall searches for a session table. If the packet does not match any entry, the firewall uses the process of the first packet.
- B. When a packet reaches the firewall, the firewall searches for a session table. If the packet matches an entry, the firewall uses the process of subsequent packets.
- C. When status detection is enabled, the firewall establishes sessions for only SYN packets during TCP packet processing.
- D. When status detection is enabled, the firewall checks subsequent packets against security policies.

Correct Answer: ABC

QUESTION 7

Which of the following access control modes is not supported by Agile Controller?

- A. 802.1X
- B. Portal
- C. MAC address bypass
- D. SACG
- E. AAA

Correct Answer: AD

QUESTION 8

MPLS performs different actions on labels. What is the meaning of the pop action?

- A. The top label is removed from the MPLS label stack.
- B. The top label is added to the MPLS label stack.
- C. The top label is replaced with another value.
- D. The top label is replaced with the label of another group.

Correct Answer: A

QUESTION 9

If the DHCP client IP address is not extended after 87.5% of the lease is reached, which packet is used by the client to extend the IP address lease?

- A. DHCP Discover broadcast packet
- B. DHCP Release unicast packet
- C. DHCP Request broadcast packet
- D. DHCP Request unicast packet

Correct Answer: C

QUESTION 10

Which following module is not the functional module of NFV framework?

- A. VIM
- B. VNF
- C. VNFM
- D. OSS

Correct Answer: C

QUESTION 11

On the alarm management page of eSight, the green color indicates that the alarm has been acknowledged.

- A. TRUE
- B. FALSE

Correct Answer: B

QUESTION 12

What are the mainly methods of data collection? (Multiple Choice)

- A. Collection by physical optical splitter
- B. Collection through port mirroring
- C. Centralized collection by NMS
- D. Automatic collection

Correct Answer: ABC

QUESTION 13

LSRs use various label distribution control modes to set up LSPs. Which of the following statements is false?

- A. There are two label distribution control modes: independent and ordered.
- B. If the label advertisement mode is DU and the label distribution control mode is Independent, an LSR distributes labels without waiting for labels from the downstream device.
- C. If the label advertisement mode is DoD and the label distribution control mode is Independent, the transit device distributes labels only after receiving a label mapping message from the egress device.
- D. If the label advertisement mode is DU and the label distribution control mode is Ordered, the transit LSR distributes labels to the ingress device only after receiving a label mapping message from the egress device.

Correct Answer: C

QUESTION 14

Which of the following command is used to apply the traffic policy to an interface on an AR router?

- A. traffic-policy pi inbound
- B. traffic classifier pi inbound
- C. traffic behavior pi inbound
- D. services-policy pi inbound

Correct Answer: A

QUESTION 15

PQ classification mechanism supports the standard or extended ACL.

A. TRUE

B. FALSE

Correct Answer: A
