⚙ **800,000+** Satisfied Customers

QUESTION 1

In the data center storage and backup scenario, which of the following is the ALL-IN-ONE positioning of BCManager services of Huawei RD products?

A. Once-click test

B. Data consistency

C. Template-based policy configuration

D. Automatic application identification

Correct Answer: A

QUESTION 2

Which of the following is the common data access level in a cloud data center?

A. Heterogeneity (NFS level)

B. Block level (Block level)

C. General level (UFS level)

D. File-level (File level)

Correct Answer: B

QUESTION 3

In the service migration scenario, which of the following statements about the service switchover procedure is incorrect?

A. After the new server is enabled; you do not need to change the corresponding record on the DNS server

B. For all service systems that connect to the source server, set the connection change to the destination server

C. After the migration, check the system CPU, memory, and network performance and service access

D. Stop the source server, synchronize data again (prevent new data generated during the migration), and enable the destination server

Correct Answer: D

QUESTION 4

In cloud data center migration scenarios, which of the following storage migration solutions requires Huawei storage licenses?

A. Migration of vMotion

B. LUN copy migration

C. Volume management migration

D. Rsync/robocopy migration

Correct Answer: B

QUESTION 5

In the storage disaster recovery and backup solution, the RPO of a storage product is 30 minutes and the RTO is 15 minutes. Which of the following statements are correct?

A. When the storage system is faulty, the time difference between the production site and the DR site may be 45 minutes.

B. The duration from the time when a fault occurs to the time when the service is suspended to the time when the service is recovered may be 45 minutes.

C. When the storage system is faulty, the time difference between the production site and the DR site may be 30 minutes.

D. The period from the time when a fault occurs to the time when the service is suspended to the time when the service is recovered may be 15 minutes.

Correct Answer: D

QUESTION 6

In the cloud data center migration scenario, which of the following statements about configuring eDevLUNs for heterogeneous virtualization is correct?

A. The read/write policy of eDevLUNs "write-back" applies to random access services, ensuring that data in the cache is cached as long as possible to improve the read hit ratio.

B. The default read/write policy of eDevLUNs is applicable to common services to balance the hit ratio and disk access performance.

C. The read/write policy "Pairing" of eDevLUNs applies to sequential access services to release cache resources for other services as soon as possible.

D. When the eDevLUN reads data, it reads the data to be read from the hard disk in advance based on the specified policy.

Correct Answer: A

QUESTION 7

A connection mode between the DAS and the server. The storage device is directly connected to the server through

cables (such as optical fibers). Which of the following statements are correct?

A. The system needs to be powered off when the core components of the DAS are maintained

B. When multiple hosts are connected to the DAS, services of different service levels can be provided

C. The number of ports that can be connected to the host is limited

D. The DAS with insufficient storage space can share the remaining space of the DAS with excessive storage resources

Correct Answer: B

QUESTION 8

In the Huawei FusionCloud solution, what are the relationships between the CCS and peripheral services?

A. The CCS provides the computing capability service

B. The DNS maps the CCS domain name to the CCS floating IP address

C. ELK Collect CCS Logs

D. EVS queries the volume type label in a specified AZ

Correct Answer: A

QUESTION 9

Huawei HiCloud platform is designed based on the mainstream microservice architecture in the industry and supports fast iteration and elastic scaling.

A. True

B. False

Correct Answer: A

QUESTION 10

In cloud data center migration scenarios, which of the following are important meanings of application association analysis?

A. Reduce the impact of migration on existing services

B. Balance the migration benefits and risks

C. Quick rollback can be performed if the migration fails

D. Reduce migration implementation complexity and migration risks

Correct Answer: A
