

Exam : MSC-111

**Title : Design Point (PTP and PMP)
Solutions**

Version : Demo

www.Pass4itSure.com

1. During the early stages of the design process, the current and planned IP addressing scheme on the project description template is used to check:

- A. IP addressing conflicts with defaults.
- B. Open Shortest Path First (OSPF) configuration
- C. IP addressing requirements for core and edge routers.
- D. network component capacity design

Answer: A

2. The reflection of a radio wave can affect the link quality:

- A. negatively ONLY
- B. positively ONLY
- C. either negatively or positively
- D. it does not affect link quality

Answer: C

3. What is the common term used to describe the process of limiting which VLAN IDs can traverse a particular VLAN trunk port.?

- A. VLAN Pruning
- B. MVRP (Multiple VLAN Registration Protocol)
- C. VTP (VLAN Trunk Protocol)
- D. VLAN Sectioning
- E. VLAN Negotiation

Answer: A

4. Dynamic addressing simplifies network administration because the software keeps track of IP addresses rather than requiring an administrator to manage the task. This means that a new device can be added to a network without the hassle of manually assigning it a unique IP address.

Which of the following devices would typically use DHCP to get an address?

- A. Switches/Hubs
- B. Client/End Devices
- C. Routers
- D. Bridges

Answer: B

5. Refraction of a radio wave could be caused by:

- A. lack of transmit power.
- B. sun spots.
- C. change in air density.
- D. antenna height.

Answer: C

6. Among the options below, which are the first three items you should identify when troubleshooting Spanning Tree Protocol errors (select THREE)?

- A. Which bridge is the root bridge

- B. How many IP gateways are on the L2 segment
- C. The topology of the L2 segment inclusive of all bridges
- D. The location of redundant links and which of their ports are blocked
- E. Which links use fiberoptic to Ethernet converters
- F. How many MAC addresses are on the L2 segment

Answer: A,C,D

7.The main function of an antenna is to:

- A. add power to a signal,
- B. decode radio signals into data traffic.
- C. direct radio energy in a desired direction.
- D. protect transmitters from lightning.

Answer: C

8.The amount of MAC addresses to Ethernet Port mappings in a switch is finite. What happens when the available mappings in these lookup tables are exhausted?

- A. The switch drops all traffic destined for MAC addresses that are not in the lookup tables
- B. The switch caches all traffic destined for the MAC addresses that are not in the lookup tables until entries become available
- C. The switch sends a congestion notification out the port to throttle the traffic until the lookup tables have available entries
- D. The switch floods traffic for all MAC addresses that do not have a lookup entry out of all its ports

Answer: D

9.What protocol does a Dynamic Domain name server work in conjunction with to dynamically create 'A' address records?

- A. Internet Control Message Protocol (ICMP)
- B. Transmission Control Protocol/Internet Protocol (TCP/IP)
- C. LACP (Link Aggregation Control Protocol)
- D. Dynamic Host Configuration Protocol (DHCP)

Answer: D

10.As a general design guideline, the signal strength required to meet a specific target modulation must be exceeded in order to guarantee reliable communications. What is this excess signal strength called?

- A. Receive Strength Ratio
- B. Fade Margin
- C. Signal Strength Ratio
- D. Diversity Margin

Answer: B

11.Microwave Point to Point systems can be susceptible to Multi-path cancellation. Which technology can help mitigate Multi-Path?

- A. IEEE 802.3AF
- B. OFDM (Orthogonal Frequency Division Duplex)

- C. Transmit time diversity
- D. RF port replication

Answer: B

12. When installing a PMP Access Point antenna on a tower, you need to install it at the proper height. Motorola recommended practice is to mount the antenna at least how many feet/meters below the top of the tower to protect it from lightning?

- A. 0 feet / meters
- B. 2 feet/0.6 meters
- C. 10 feet/3 meters
- D. 25 feet / 8 meters

Answer: B

13. Thermal Ducting is a phenomenon often seen over great distances of water and flat hot terrain. It is the layering of different density air in the atmosphere and can cause significant signal fading. One possible solution to Thermal Ducting is to:

- A. use two physically separated single polarized antennas (also known as Space Diversity)
- B. deploy a single polarization microwave system.
- C. increase frequency to increase free space attenuation.
- D. deploy a Dual Polarity antenna at both ends of a link.

Answer: A

14. High Performance parabolic directional antennas are used in FTP network designs and provide:

- A. side lobe suppression and interference mitigation.
- B. broadest (or widest) beamwidth
- C. superior wind loading for storm prone areas.
- D. consistent spectrum analysis.

Answer: A

15. Spatial Diversity is an antenna configuration that can be used to help point to point links: A. over long distances of water where reflections are causing cancellation,

- B. when interference from multiple directions is an issue.
- C. when wind loading constraints will not allow a dual polarized antenna.
- D. if site access is restricted because of security issues.

Answer: A

Trying our product !

- ★ **100%** Guaranteed Success
- ★ **100%** Money Back Guarantee
- ★ **365 Days** Free Update
- ★ **Instant Download** After Purchase
- ★ **24x7** Customer Support
- ★ Average **99.9%** Success Rate
- ★ More than **69,000** Satisfied Customers Worldwide
- ★ Multi-Platform capabilities - **Windows, Mac, Android, iPhone, iPod, iPad, Kindle**

Need Help

Please provide as much detail as possible so we can best assist you.

One Year Free Update

Free update is available within One Year after your purchase. After One Year, you will get 50% discounts for updating. And we are proud to boast a 24/7 efficient Customer Support system via Email.

Money Back Guarantee

To ensure that you are spending on quality products, we provide 100% money back guarantee for 30 days from the date of purchase.

Security & Privacy

We respect customer privacy. We use McAfee's security service to provide you with utmost security for your personal information & peace of mind.
