QUESTION 8

What is the first step for setting up a cluster Data ONTAP 8.2?

- A. Cluster Setup
- B. Join Cluster
- C. Install second node
- D. Enable HA

Correct Answer: A

Setting up the cluster involves creating the cluster on the first node, joining any remaining nodes to the cluster, and configuring a number of features--such as synchronizing the system time--that enable the cluster to operate nondisruptively. The cluster setup command runs the cluster setup wizard, which can be used to either create a cluster or join a node to an existing cluster. When you run the cluster setup wizard, enter the appropriate information at the prompts. You will be asked to provide the following information to create a cluster: Cluster name Cluster base license key Feature license keys Cluster administrator's password Cluster management interface port, IP address, netmask, default gateway Node management interface port, IP address, netmask, default gateway DNS domain names Name server IP addresses Location You will be asked to provide the following information to join a cluster: Cluster name Node management interface port, IP address, netmask, default gateway Link:
