**QUESTION 3**

A customer reports that a Linux system is unable to access a required NFS export on an ONTAP SVM named "svm01-02". This is an important server in their NIS environment and users are unable to log in. Referring to the logs, they see several notifications of the message shown below.

"exports.netgroup.dnsNoPtrRec: IP address "192.168.1.13" does not have a reverse mapping for its corresponding hostname in the configured name servers when evaluating the export-policy rules for netgroup "linux\_1" on Vserver "svm01- 02"."

In this scenario, what is causing the problem?

- A. The export policy has the wrong netgroups defined.
- B. The DNS server does not have the relevant mapping from the IP address to the hostname.
- C. The ns-switch sources are set to files,dns instead of hosts,dns.
